Priority Health Choice Medical Drug Prior Authorization Criteria

This document contains prior authorization criteria for physician-administered medications administered in outpatient, non-emergent settings. These medications are covered under the medical benefit of Priority Health Choice Medicaid, Medicaid CSHCS, and Healthy MI plans.

What is a prior authorization?

When a medication requires prior authorization, it means that certain clinical criteria must be met before the medication can be covered. Clinical prior authorizations should be completed *prior* to administration of the drug.

How to know when a physician-administered medication requires prior authorization

To know when a medication requires prior authorization, use the Medical Benefit Drug List (MBDL), posted on the <u>Medicaid Approved Drug List (ADL)</u>. Prescribers should use the Medicaid Medical Authorization form, along with the criteria in this document, to request prior authorization. Providers are responsible for understanding if a drug HCPCS codes is included in the fee schedule applicable to their claims and whether the NDC dispensed is payable per MDHHS policy.

Not all physician-administered medications are covered by this plan

There are certain physician-administered drugs that are not covered. Some medications are carved-out to Fee-For-Service Medicaid. MDHHS maintains <u>a list</u> of these drugs. Providers should contact Fee-For-Service Medicaid regarding coverage of carve-out drugs. Additionally, medications that are excluded from coverage by the members Certificate of Coverage will not be covered.

Drug Name	HCPCS Code	Criteria
Actemra IV (tocilizumab)	J3262	Approved Diagnosis: • Rheumatoid Arthritis (RA) • Polyarticular Juvenile Idiopathic Arthritis (PJIA) • Systemic Juvenile Idiopathic Arthritis (SJIA) • Giant Cell Arteritis • Cytokine Release Syndrome
		Approval Timeframe: • Initial authorization: 2 years • Continuation authorization: 2 years
		Prescriber Specialty Requirement: none
		Age Limitation: age 2 years or older
		Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis
		Initial Criteria: Rheumatoid Arthritis (RA) • Must provide documentation confirming diagnosis, AND • Must provide the patient's current weight, AND • Must have a documented trial and documented therapeutic failure with infliximab
		 Juvenile Idiopathic Arthritis (Polyarticular & Systemic) Must provide documentation confirming diagnosis, AND Must provide patient's current weight
		<u>Giant Cell Arteritis</u> Patient has tried one systemic corticosteroid
		 <u>Cytokine Release Syndrome</u> Patient is experiencing a severe or life-threatening T-cell induced reaction; AND The IV formulation of Actemra is being used for treatment; AND A maximum of 4 doses is requested
		 Continuation Criteria: Must provide documentation confirming diagnosis, AND Must provide the patient's current weight, AND Must provide documentation showing the patient has experienced improvement or maintained stable clinical status
		 Additional Information: The subcutaneous form of this drug will not be covered under the medical benefit. Refer to the Approved Drug List (ADL) for coverage under the pharmacy benefit. This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center.
		 Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy.

Adakveo (crizanlizumab-tmca)	J0791	Approved Diagnosis: • Sickle Cell Disease Approval Timeframe: • Initial authorization: 6 months • Continuation authorization: 1 year Prescriber Specialty Requirement, none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Age Limitation: Must be age 16 years or older Initial Criteria: • Documentation confirming diagnosis, AND • Must provide the patient's current weight, AND • Documentation confirming diagnosis, AND • Documentation confirming diagnosis, AND • Documentation confirming diagnosis, AND • Documentation of at least two vaso-occlusive crises (VOCs) in the last year Continuation Criteria: • Documentation confirming diagnosis, AND • Must provide the patient's current weight, AND • Must provide the patient's current weight, AND • Documentation showing the patient has experienced a reduction in vaso-occlusive crises while on Adakveo therapy. Additional Information: • Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy. • This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center.

Adzynma (ADAMTS13, recombinant-krhn)	J7171	Approved Diagnosis: • congenital thrombotic thrombocytopenic purpura (cTTP) Approval Timeframe: • Initial authorization: 6 months • Continuation authorization: 12 months Prescriber Specialty Requirement: Must be prescribed by or in consultation with a specialist for the disease state Age Limitation: Must be age 18 years and older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Must have a diagnosis of congenital thrombotic thrombocytopenic purpura (cTTP) confirmed by genetic testing: AND • Documentation of ADAMTS13 activity must be provided and is less than 10%; AND • Documentation of Current weight; AND • Initial dosing frequency for prophylactic use is not to exceed every 2 weeks Continuation Criteria: • Documentation showing patient has demonstrated a beneficial response to therapy (e.g., decrease in acute and subacute TTP events, improvement in platelet count from baseline, decrease in microangiopathic hemolytic anemia episodes) Additional Information: • This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center. • Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy. </th

Aldurazyme (laronidase)	J1931	Approved Diagnosis: • Mucopolysaccharidosis I (MPS I) • Hurler form • Hurler-Scheie form • Scheie form with moderate to severe symptoms
		Approval Timeframe: • Initial authorization: 6 months • Continuation authorization: 1 year
		Prescriber Specialty Requirement: none
		Age Limitation: none
		Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis
		 Initial Criteria: Documentation confirming diagnosis, AND Documentation of patient's current weight

Alpha-1 Proteinase Inhibitor – human Aralast NP Prolastin-C Zemaira Glassia	J0256 (J0257 Glassia)	 Approved Diagnosis: congenital alpha1-antitypsin deficiency Approved Timeframe: Initial authorization: 1 year Continuation authorization: 1 year Prescriber Specialty Requirement; none Age Limitation: 18 years and older Documentation of clinically evident emphysema, AND Documentation of clinically evident emphysema, AND It movi/L is equal to 80 mg/dL if measured by radial immunodiffusion 11 mmol/L is equal to 80 mg/dL if measured by nephelometry Continuation of clinically evident emphysema, AND Documentation of clinically evident emphysema, AND Documentation of clinically evident emphysema, AND Documentation of clinically evident emphysema, AND Patient must be a non-smoker, AND Patient must be included showing serum alpha1-antitrypsin (AAT) level greater than 11 mmol/L. AND Current labs must be included showing serum alpha1-antitrypsin (AAT) level greater than 11 mmol/L. Additional Information: Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy.
--	-----------------------------	---

Amvuttra (vutrisiran)	J0225	Approved Diagnosis: • polyneuropathy of hereditary transthyretin-mediated amyloidosis (hATTR-PN) Approval Timeframe:
		 Initial authorization: 1 year Continuation authorization: 1 year
		Prescriber Specialty Requirement: Must be prescribed by, or in consultation with a cardiologist or neurologist
		Age Limitation: none
		Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis
		Initial Criteria:
		hATTR-PN
		 Documentation confirming diagnosis of hereditary transthyretin-mediated amyloidosis (hATTR) with polyneuropathy AND Documentation of genetic testing that confirms a transthyretin (TTR) mutation AND Must have presence of clinical signs and symptoms of the condition (e.g., motor
		 disability, peripheral/autonomic neuropathy, etc.) AND Must have documentation of one of the following:
		 Baseline polyneuropathy disability (PND) score ≤ IIIb; OR
		 Baseline FAP Stage 1 or 2 AND Patient has not had a liver transplant
		ATTR-CM
		 Documentation confirming diagnosis ATTR-CM must be confirmed by genetic testing, tissue biopsy, or radionuclide imaging (99mTcPYP, 99mTc- DPD, or 99mTc-HMDP scan); AND Medical history of heart failure that includes one of the following at least one prior hospitalization of heart failure OR clinical evidence of heart failure AND Must not currently have, or have history of: New York Heart Association (NYHA) Class 4 heart failure Primary (light-chain) amyloidosis Prior liver or heart transplant or an implanted cardiac device AND Will not be used concurrently with Amvuttra, Onpattro, Wainua, Vyndaqel, or Vyndamax AND Trial and failure or Intolerance/contraindication to one of the following: Attruby (acoramidis), Vyndaqel (tafamidis meglumine), Vyndamax (tafamidis
		 Continuation Criteria: Documentation confirming diagnosis AND Documentation that the patient has experienced a positive clinical response to Amvuttra compared to baseline (e.g., improved neurologic improvement, motor function, quality of life, slowing of disease progression) AND Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy.
		 Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be administered in an outpatient hospital infusion center. Amvuttra will not be covered in combination with tafamidis (Vyndaqel, Vyndamax), Onpattro, Wainua or Attruby

Benlysta IV (belimumab)	J0490	Approved Diagnosis: • Systemic lupus erythematosus (SLE) • Lupus nephritis Approval Timeframe: • Initial authorization: 24 weeks • Continuation authorization: 1 year
		Prescriber Specialty Requirement: none
		Age Limitation: Must be age 5 years or older
		Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis
		Disse a rrequency, Limited to FDA approved dose a frequency by diagnosis Initial Criteria: Systemic lupus erythematosus (SLE) • Must provide documentation confirming diagnosis of active, autoantibody-positive systemic lupus erythematosus (SLE) with one of the following: • <
		 Systemic lupus erythematosus (SLE) Must provide documentation confirming diagnosis; AND
		 Documentation of patient's current weight; AND Patient must meet 3 of the following:
		 Must have a SELENA-SLEDAI score point reduction of 4 or more based on a 30- day assessment; OR
		 Must have a Physician Global Assessment change indicating showing no disease progression (worsening) compared to baseline treatment with Benlysta; OR
		 Must have a British Lupus Assessment Group (BILAG) score of zero in Category A (very active disease) –and– a score of one or less in Category B (moderately active, in any organ system in the last 4 weeks); OR A reduction in dose of steroid therapy; OR A negative seroconversion or a 20% reduction in autoantibody levels from
		 baseline; OR Free of significant clinical flares that require steroid boost treatment with Benlysta
		 Lupus nephritis Must have evidence of efficacy (defined as urinary protein creatinine ratio ≤0.7, eGFR ≤20% below the pre-flare or at least 60mL/min/1.73m2), and no use of rescue therapy for treatment failure
		 Additional Information: The subcutaneous form of this drug will not be covered under the medical benefit. Refer to the Approved Drug List (ADL) for coverage under the pharmacy benefit. This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center. Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy.

Botulinum ToxinBotoxDysportMyoblocXeominDaxxify	J0585 J0587 J0588 J0589	Approved Plannesis: • Bladder Dysfunction • Overactive Bladder • Detrusor Overactivity associated with a Neurologic Condition • Chronic Migraine • Spasticity or Dystonia associated with: • Cerebral Palsy • Demyelinating diseases of the CNS and copus callosum including Leukodystrophy • Esophageal achilasia • Facial nerve VII disorder (facial myokymia, Melkersson's syndrome, facial/hermifacial spasms) • Hereditary spastic paraplegia • Laryngeel apsam, Laryngeel adductor spastic dysphonia or stradulus • Multiple Sciencesis • Orofacial dyskinesia • Schüder's disease • Strabismus • Cervical Oystonia • Spastic hemiplegia due to stroke or brain injury • Torticollis • Primary Axillary Hyperhidrosis • Palam Hyperhidrosis • Decumentation or finiming diagnosis Ana

Botulinum ToxinBotoxDysportMyoblocXeominDaxxify	J0585 J0587 J0588 J0589	 Chronic MigrainE Documentation that headaches are disabling and occur on 15 days or more each month, lasting four hours each day or longer. Patient has tried and failed at least one-month of any two of the following oral medications: Antidepressants (e.g., amitriptyline, nortriptyline) Beta blockers (e.g., valproate, topiramate) Descumentation of therapeutic trial and failure with two or more anticholinergic drugs. Anti-epileptics (e.g., valproate, topiramate) Documentation of therapeutic trial and failure on anticholinergic therapy. Documentation confirming diagnosis Documentation showing the patient has demonstrated a beneficial response to therapy (B no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy. Adtional Information No authorization required when drug is billed by a provider with one of the following specialties: Rehabilitation Medicine, Physical Medicine & Rehab, or Neurology The following conditions are not covered: Botulinum toxin for the tratement of anal spasm, irritable colon, biliary dyskinesia, craniofacial winkles or any treatment of other spastic conditions not listed as a covered on this prior authorization form are considered experimental (including the treatment of smooth muscle spasi). Botulinum toxin for patients receiving aminoglycosides Botulinum toxin for patients receiving armitogi days for two years. It is usually medical record review as well as treatments where the goal is to improve appearance rather than function. Use of botulinum toxin for the treatment of one days days for two years. It is usually not considered medically necessary to give botulinum toxin injection more frequently than every 90 days. An exception is for migraine prophylaxis, which will be authorized for one ondose every 84 days. The maximum cumulative dose should generally not ex

Brineura (celiponase alfa)	J0567	Approved Diagnosis: Late-infantile neuronal ceroid lipofuscinosis type 2 (CLN2) disease
		Approval Timeframe: • Initial authorization: 6 months • Continuation authorization: 6 months
		Prescriber Specialty Requirement: Must be prescribed by a neurologist
		Age Limitation: none
		Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis
		 Initial Criteria: Must have a diagnosis of late-infantile neuronal ceroid lipofuscinosis type 2 (CLN2) disease which was confirmed by tripeptidyl peptidase 1 (TPP1) deficiency (testing must be included with submission); AND Patient must be symptomatic; AND Treatment is being given to slow the loss of ambulation in a patient with a baseline motor-language CLN2 clinical rating scale (CRS) greater than or equal to 3
		Continuation Criteria: Patient must meet all of the initial requirements; AND
		• Patient has a score of 1 or higher in the motor domain of the CLN2 clinical rating scale;
		 AND Clinical documentation, including chart notes, of disease stability or improvement must be provided

Briumvi (Ublituximab-xiiy)	J2329	Approved Diagnosis: • Primary Progressive MS • Relapsing-remitting MS
		Approval Timeframe: • Initial authorization: 2 years • Continuation authorization: 2 years
		Prescriber Specialty Requirement: Neurologist or specialist in MS
		Age Limitation: age 18 years and older
		Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis
		Initial Criteria: • Documentation confirming diagnosis of: • Primary Progressive Multiple Sclerosis (PPMS) • Relapsing-Remitting [RRMS] or Secondary Progressive multiple sclerosis
		 Continuation Criteria: Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy.
		 Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center. Briumvi will not be approved in combination with any other disease modifying therapy for
		multiple sclerosis

Byooviz (ranibizumab-nuna)	Q5124	Approved Diagnosis: • Neovascular (wel) age-related macular degeneration (AMD) • Macular edema following retinal vein occlusion (RVO) • Diabetic macular edema (DME) • Diabetic macular edema (DME) • Diabetic macular edema (DME) • Myopic Choroidal Neovascularization (mCNV) Approval Timeframe: • Initial authorization: 1 year Prescriber Specialty Requirement: none Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis • Date cumentation confirming diagnosis • Patients currently receiving treatment with Byooviz and who have demonstrated an adequate response are not required to try Avastin. Neovascular (wel) age-related macular degeneration (AMD): • Must first try Avastin (bevacizumab) for at least 3 consecutive months with failure to effectively improve baseline visual acuity and/or reduce fluid • Avastin is not required if patient has serous pigment epithelial detachment (PED), hemorrhagic PED, subretinal hemorrhage, or posterior uveal bleeding syndrome. Macular edema (DME) • Must first try Avastin (bevacizumab) for at least 3 consecutive months with failure to effectively improve baseline visual acuity and/or reduce fluid Diabetic macular edema (DME) • Must first try Avastin (bevacizumab) for at least 3 consecutive months with failure to effectively improve baseline visual acuity

Cerezyme (imiglucerase)	J1786	 Approved Diagnosis: Diagnosis of Non-neuropathic Gaucher's disease, chronic, symptomatic Approval Timeframe: Initial authorization: 6 months Continuation authorization: 1-year Prescriber Specialty Requirement: none Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Documentation confirming diagnosis Documentation of patient's current weight Continuation criteria only applies if the member is not able to safely receive the medication by home infusion Documentation confirming diagnosis Documentation confirming diagnosis Documentation showing the patient has demonstrated a beneficial response to therapy compared to pretreatment baseline in one or more of the following: clinically significant reduction in spleen or liver volume, increase in platelet or hemoglobin values Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy. Additional Information: This drug is included in Priority Health's medical policy 91414 – Infusion Services and Equipment, which requires medications to be administered by home infusion is new to the patient, Priority Health may cover up to 3 months of treatment at an outpatient hospital infusion center until safety has been established.

Cimerli (ranibizumab-eqrn)	Q5128	 Approved Diagnosis: Neovascular (wet) age-related macular degeneration (AMD) Macular edema following retinal vein occlusion (RVO) Diabetic macular edema (DME) Diabetic macular edema (DME) Diabetic retinopathy (DR) Myopic Choroidal Neovascularization (mCNV) Approved Timeframe: Initial authorization: 1 year Continuation authorization: 1 year Continuation authorization: 1 year Patients Contention on the provided set of the provided s

Cimzia (certolizumab pegol)	J0717	Approved Diagnosis: • Non-radio graphic Axial Spondyloarthritis • Ankylosing Spondylitis • Crohn's Disease • Plaque Psoriasis • Psoriatic Arthritis • Rheumatoid Arthritis • polyarticular Juvenile Idiopathic Arthritis (pJIA) Approval Timeframe: • Initial authorization: 2 years • Continuation authorization: 2 years
		Prescriber Specialty Requirement: none
		Age Limitation: • pJIA: age 2 years or older
		All other indications: age 18 years or older
		Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis
		 Initial Criteria: Must provide documentation confirming diagnosis, AND Must provide the patient's current weight, AND Must have a documented trial and documented therapeutic failure with infliximab unless prescribed for non-radiographic axial spondyloarthritis
		 Continuation Criteria: Must provide documentation confirming diagnosis, AND Must provide the patient's current weight, AND Must provide documentation showing the patient has experienced improvement or maintained stable clinical status
		 Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center. Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy.

Cinqair (reslizumab)	J2786	Approved Diagnosis: • Severe, Eosinophilic Asthma Approval Timeframe: • Initial authorization: 1 year
		Continuation authorization: 1 year Prescriber Specialty Requirement: none
		Age Limitation: 18 years or older
		Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Documentation of patient's current weight • Must have been compliant on all the following therapies for at least 3 consecutive months each: • High-dose inhaled corticosteroid (ICS)* • Long-acting beta agonist (LABA) • One additional asthma controller medication (e.g., leukotriene receptor antagonist, Spiriva) • Documentation showing the member experienced > 2 asthma exacerbations in the previous year that required at least ONE of the following: • Systemic steroids (or an increase in the current steroid maintenance dose) for at least 3 days • Hospitalization and/or ED visit • Must not currently use tobacco products • Must not currently use tobacco products • Must nave been compliant on therapy with Cinqair • Documentation showing the patient has experienced improvement or maintained stable clinical status. • Must not use in combination with other biologics (e.g., Nucala, Dupixent, Fasenra, Xolair, or reaspire) • Documentation showing the patient has experienced improvement or maintained stable clinical status. • Must not use in combination with other biologics (e.g., Nucala, Dupixent, Fasenra, Xolair, or reaspire) • Documentation showing the patient has had a positive clinical response (e.g., decrease in exacerbation frequency, improvement in asthma symptoms, decrease in oral corticosteroid use)

Cosela (trilaciclib)	J1448	Approved Diagnosis: • Extensive small cell lung cancer (SCLC) Approval Timeframe: • Initial authorization: 12 months Prescriber Specialty Requirement, none Age Limitation: none Dose & Frequency; Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Documentation confirming diagnosis of extensive small cell lung cancer (SCLC) • Patient is currently receiving • platinum/etoposide +/+ immune checkpoint inhibitor; or • a topotecaricontaining regimen • The patient has previously experienced severe neutropenia while using one of the regimens described above, despite use of G-CSF products (i.e. fligrastim, pegfilgrastim). Continuation Criteria: • Documentation showing that the patient has demonstrated a beneficial response to therapy. • Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy.

Crysvita (burosumab-twza)	J0584	Approved Diagnosis: • X-linked hypophosphatemia (XLH) • Tumor-induced osteomalacia (TIO)
		Approval Timeframe: • Initial authorization: 12 months • Continuation authorization: 12 months
		Prescriber Specialty Requirement: none
		Age Limitation: See diagnosis specific age limits below
		Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis
		Initial Criteria:
		 X-linked hypophosphatemia (XLH) Patient must be age 6 months or older; AND Documentation of diagnosis confirmed by one of the following must be included Genetic testing (PHEX-gene mutation); or Serum fibroblast growth factor-23 (FGF23) level > 30 pg/mL; AND Must have baseline serum phosphorus level below lower limit of laboratory reference range with current hypophosphatemia; AND Documentation confirming the patient is exhibiting clinical signs and symptoms of XLH (e.g. rickets, growth retardation, musculoskeletal pain, bone fractures, etc.). <u>Tumor-induced osteomalacia (TIO)</u> Patient must be age 2 years or older; AND Must be used for treatment of FGF23-related hypophosphatemia in tumor-induced osteomalacia (TIO) associated with phosphaturic mesenchymal tumors that cannot be curatively resected or localized; AND Must have baseline serum phosphorus level below lower limit of laboratory reference range with current hypophosphatemia.
		 (documentation of laboratory levels must be submitted) Documentation must be submitted showing patient experienced a positive clinical response to therapy (e.g. enhanced height velocity, improvement in skeletal deformities, reduction in bone fractures)
		 Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center.

Dalvance (dalbavancin)	J0875	 Approved Diagnosis: Acute bacterial skin and skin structure infection (ABSSSI) Approval Timeframe: Initial authorization: 1 month Continuation authorization: N/A Prescriber Specialty Requirement: none Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Documentation of culture and sensitivity results must be sent to Priority Health showing the patient's infection is not susceptible to alternative antibiotic treatments Confirmation that Dalvance will be started in the hospital or other health care facility and will be continued in outpatient facility NOTE: Inpatient claims are not managed by PH Pharmacy Department Must have documented methicillin-resistant Staphylococcus aureus (MRSA) acute bacterial skin and skin structure infection (ABSSSI) that is resistant to all other MRSA sensitive antibiotics or be unable to tolerate alternatives.
Duopa (carbidopa 5 mg/levodopa 20 mg enteral suspension)	J7340	Approved Diagnosis: • Parkinson's disease Approval Timeframe: • Initial authorization: 1 year • Continuation authorization: 1 year Prescriber Specialty Requirement: Must be prescribed by, or in consultation with, a neurologist. Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Documentation of therapeutic failure after a one-month trial with carbidopa/levodopa ER tablet given at multiple daily dosing Continuation Criteria: • Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy

Elaprase (idursulfase)	J1743	Approved Diagnosis: • Hunter syndrome (Mucopolysaccharidosis II) Approval Timeframe: • Initial authorization: 6 months • Continuation authorization: 1 year Prescriber Specialty Requirement; none Ase Limitation; none Dose & Frequency; Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Documentation confirming diagnosis of Hunter syndrome (Mucopolysaccharidosis II) • Documentation of patient's current weight Continuation criteria only applies if the member is unable to safely receive the medication by home infusion • Documentation confirming diagnosis • Documentation confirming diagnosis • Documentation of patient's current weight • Documentation of patient's current weight • Documentation on showing that the patient has demonstrated a beneficial response to therapy compared to pretreatment baseline in one or more of the following: • clinically significant reduction in spleen or liver volume • clinically significant reduction in spleen or liver volume • clinically significant reduction in spleen or liver volume • clinically significant reduction in spleen or liver volume • clinically significant reduction in spleen or liver volume • clinically subshill drug to the pharmacy benefit. Noticin. Home infusion. Home infusion sqleenc

Elelyso (taliglucerase alfa)	J3060	Approved Diagnosis: • Gaucher's Disease (Type 1) Approval Timeframe: • Initial authorization: 6 months • Continuation authorization: 1 year Prescriber Specialty Requirement: none Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Documentation confirming diagnosis of Gaucher's Disease (Type 1) • Documentation of patient's current weight Continuation criteria only applies if the member is unable to safely receive the medication by home infusion • Documentation confirming diagnosis • Documentation of patient's current weight • Documentation of patient's current method abeneficial response to therapy compared to pretreatment baseline in one or more of the following: • stabilization or improvement in FVC; and/or • stabilization or improvement in FVC; and/or • stabilization or improvement of 64MWT Additional Information: • This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be administered by home infusion. Home infusion agencies must bill the drug to the pharmacy benefit. Note: if this

Elfabrio (pegunigalsidase alfa-iwxj)	J2508	 Approved Diagnosis: Fabry disease Approval Timeframe: Initial authorization: 6 months Continuation authorization: 1 year Prescriber Specialty Requirement: Must be prescribed by a nephrologist, cardiologist, specialist in metabolic disorders or genetics Age Limitation: 18 years and older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Documentation of patient's current weight Documentation confirming diagnosis of Fabry disease (e.g., alpha-Gal A activity in leukocytes or plasma, mutation analysis of the alpha-Gal A gene) The patient is either a: Classically affected male (i.e., male with very low or undetectable levels of alpha-galactosidase A [alphaGal A]): OR Female carrier or male with atypical presentations (i.e., with marginal levels of alpha-Gal A) with clinical manifestations of Fabry disease (e.g., renal, neurologic, cardiovascular) present
		 Continuation criteria Continuation criteria only applies if the member is unable to safely receive the medication by home infusion: Documentation confirming diagnosis Documentation of patient's current weight Documentation showing a continued response to treatment (e.g., reduction in plasma glycosphingolipid GL-3 levels compared to baseline) Patient has remained compliant with > 50 percent of treatments Patient has remained compliant with > 50 percent of treatments Patient has remained compliant with > 50 percent of treatments Patient has not developed ESRD, without an option for renal transplantation, in combination with advanced heart failure (New York Heart Association class IV) Patient does not have end-stage Fabry disease or other comorbidities with a life expectancy of < 1 year Patient has not experienced severe cognitive decline Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be administered by home infusion. Home infusion agencies must bill the drug to the pharmacy benefit. Note: if this medication is new to the patient. Priority Health may cover up to 3 months of treatment at an outpatient hospital infusion center until safety has been established.

Empaveli (pegcetacoplan)	J7799 C9399	Approved Diagnosis: • Paroxysmal Nocturnal Hemoglobinuria (PNH) Approval Timeframe: • Initial authorization: 6 months • Continuation authorization: 1 year
		Prescriber Specialty Requirement: Hematology/Oncology
		Age Limitation: 18 years and older
		Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis
		Initial Criteria: • Documentation confirming diagnosis must be submitted; AND • Must have flow cytometric confirmation ≥10% granulocyte clone cells; OR • Have symptoms of thromboembolic complications (abdominal pain, shortness of breath, chest pain, end organ damage
		 Continuation Criteria: Documentation confirming diagnosis; AND Must have a decrease disabling symptoms; AND Hemoglobin levels must be stabilized; AND Patient has experienced an improvement in fatigue and quality of life
		 Additional Information: This drug is included in Priority Health's medical policy 91414 – Infusion Services and Equipment, which requires medications to be administered by home infusion. Home infusion agencies must bill the drug to the pharmacy benefit. Note: if this medication is new to the patient, Priority Health may cover up to 3 months of treatment at an outpatient hospital infusion center until safety has been established.

Encelto (revakinagene taroretcel-lwey)	J3590	 Approved Diagnosis: MacTel type 2 Approval Timeframe: Initial authorization: Single implant per eye per lifetime Continuation authorization: N/A Prescriber Specialty Requirement: Must be prescribed by an ophthalmologist (retinal specialist) Age Limitation: 18 years and older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Documentation (test results) must be submitted confirming diagnosis of MacTel type 2 Documentation must be submitted showing patient has evidence of fluorescein leakage and at least one of the following additional characteristics: hyperpigmentation, crystalline deposits, right-angle vessels, OR inner/outer lamellar cavities. Patient must have IS/OS PR break (loss) in EZ between 0.16 and 2.00 mm² Patient must not have evidence of neovascular MacTel type Patient must not have previously received an Encelto implant.
Enjaymo (sutimlimab-jome)	J1302	Approved Diagnosis: • Cold Agglutinin Disease (CAD) Approval Timeframe: • Initial authorization: 6 months • Continuation authorization: 1 year Prescriber Specialty Requirement: Must be prescribed by, or in consultation with, a hematologist Age Limitation: 18 years and older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Documentation confirming diagnosis of cold agglutinin disease (CAD); AND • Documentation of the patient's current weight and baseline hemoglobin level must be submitted; AND • Documentation of at least one blood transfusion within 6 months of starting Enjaymo; AND • Patient's hemoglobin must be ≤ 10 g/dL; AND • Must be a presence of one or more symptoms associated with CAD (e.g., symptomatic anemia, acrocyanosis, Raynaud's phenomenon, hemoglobinuria, disabling circulatory symptoms, or a major adverse vascular event); AND • Must have a documented trial and failure with a rituximab-containing regimen Continuation Criteria: • no blood transfusions 5 weeks from initiation of therapy Additional Information: • This drug is included in Priority Health's medical policy 91414 – Infusion Services and Equipment, which requires medications to be administered by home infusion. Home infusion agencies must bill the drug to the pharmacy benefit. If this medication is new to the patient, and if requested, Priority Health may cover up to

Entyvio IV (vedolizumab)	J3380	Approved Diagnosis: • Crohn's disease • Ulcerative Colitis Approval Timeframe: • Initial authorization: 14 weeks • Continuation authorization: 2 years Prescriber Specialty Requirement: none Age Limitation: 18 years and older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Mild Crohn's disease • Must have documented therapeutic failure with one of the following: • Corticosteroids • Mesalamine • Olsalazine • Azathioprine • Azathioprine • Genercaptopurine (6-MP) • Must have documented therapeutic failure with infliximab Moderate to Severe Crohn's disease • Patient has moderate to severe Crohn's disease; AND • Must have documented prior use of corticosteroids for treatment of Crohn's disease; AND • Must have documented therapeutic failure with infliximab Mild to Moderate Ulcerative Colitis • Must have documented therapeutic failure with wo of the following: • Genercaptopurine (6-MP) • Azathioprine • Balsalazide • Gorticosteroids • Must have documented therapeutic failure with

		 Must have documented therapeutic failure with infliximab <u>Severe Ulcerative Colitis</u> Patient has frequent loose bloody stools (≥6 per day) with severe cramps and evidence of systemic toxicity; AND Must have documented prior use of corticosteroids for treatment of Ulcerative Collitis; AND Must have documented therapeutic failure with infliximab Continuation Criteria: Documentation confirming diagnosis; AND Must have a positive clinical response to Entyvio as indicated by one of the following; decrease in bowel movements per day, no blood in stool, decrease in oral corticosteroid use, or decrease in inflammatory markers such as fecal calprotectin, C-reactive protein.
		 Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center.
Epoprostenol Sodium Flolan Veletri	J1325	Approved Diagnosis: • Pulmonary arterial hypertension Approval Timeframe: • • Initial authorization: 1 year • Continuation authorization: 2 years Prescriber Specialty Requirement: none Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Documentation confirming diagnosis of pulmonary arterial hypertension to improve exercise capacity and delay clinical worsening • Patient must have a World Health Organization group 1 classification of pulmonary arterial hypertension Continuation Criteria: • • Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy.

Evenity (romosozumab-aqqg)	J3111	 Approved Diagnosis: Postmenopausal osteoporosis Approval Timeframe: Initial authorization: 1 year (12 total doses) Continuation authorization: N/A Prescriber Specialty Requirement: none Age Limitation: none Doscumentation confirming diagnosis of postmenopausal osteoporosis Documentation of a T-score less than or equal to -3 Documentation of previous low-impact fracture Must have a documented therapeutic failure** with an oral bisphosphonate (or documented intolerance or contraindication) despite a minimum, compliant 2-year trial Must have a documented therapeutic failure** (or documented intolerance or contraindication) despite a minimum, compliant 2-year trial Must have a documented therapeutic failure** (or documented intolerance or contraindication) despite a minimum 12-month trial Additional Information: **Therapeutic failure is defined by: new fracture while on treatment, or reduction in bone mineral density (BMD) per recent DEXA scan. If member has a new fracture while on a bisphosphonate, only a trial of one bisphosphonate (oral or V) is required This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center.

Evkeeza (evinacumab-dgnb)	J1305	 Approved Diagnosis: Homozygous Familial Hypercholesterolemia (HoFH) Approval Timeframe: Initial authorization: 12 months Continuation authorization: 12 months Prescriber Specialty Requirement: Must be prescribed by, or in consultation with, a cardiologist, endocrinologist, or board-certified lipidologist Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Documentation must be submitted confirming diagnosis of Homozygous Familial Hypercholesterolemia (HoFH), by one or more of the following: Presence of two mutant alleles at the LDL receptor, Apolipoprotein B, or PCSK9 gene; or An untreated LDL-C greater than 500 mg/dL (13 mmol/L) before treatment or greater than 300 mg/dL). Documentation of compliant use with at least one high-intensity statin (rosuvastatin at least 20 mg daily) or atorvastatin at least 40 mg daily) in combination with exetimibe AND a PCSK9 inhibitor (e.g. Repatha/evolocumab) for at least 8 consecutive weeks with failure to achieve LDL-C goal. Patient must continue to receive maximally tolerated statin therapy or have a contraindication to or intolerance of statin therapy If one high-intensity statin is not tolerated, a trial of a second statin is required Requires documentation of failure to reach LDL-C goal using LDL apheresis Not covered in combination with Nexletol (bempedoic acid), Nexlizet (bempedoic acid/ezetimibe), Juxtapid (lomitapide), or a PCSK9 inhibitor (Repatha, Praluent). Continuation Criteria: Documentation must be submitting showing improved and maintained an improved LDL compared

		 Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center.
Eylea HD (aflibercept)	J0178 J0177	Approved Diagnosis: • Neovascular (wet) age-related macular degeneration (AMD) • Macular edema following retinal vein occlusion (RVO) • Diabetic macular edema (DME) • Diabetic macular edema (DME) • Diabetic retinopathy • Retinopathy of Prematurity (ROP) Approval Timeframe: • Initial authorization: 1 year • Continuation authorization: 1 year Prescriber Specialty Requirement: none Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Documentation confirming diagnosis • Patients currently receiving treatment with Eylea and who have demonstrated an adequate response are not required to try Avastin. Neovascular (wet) age-related macular degeneration (AMD): • Must first try Avastin (bevacizumab) for at least 3 consecutive months with failure to effectively improve baseline visual acuity and/or reduce fluid • Avastin is not required if patient has serous pigment epithelial detachment (PED), hemorrhagic PED, subretinal hemorrhage, or posterior uveal bleeding syndrome. Macular edema following retinal vein occlusion (RVO) • Must first try Avastin (bevacizumab) for at least 3 consecutive months with failure to effectively improve baseline visual acuity and/or reduce fluid Diabetic macular edema (DME) with baseline visual acuity 2050

		Diagnosis of Retinopathy of Prematurity (ROP)
		Continuation Criteria:
		Documentation confirming diagnosis
		 Documentation showing the disease response as indicated by:
		 stabilization of visual acuity, or
		 improvement in BCVA score when compared to baseline.
Fabrazyme	J0180	Approved Diagnosis: Fabry disease
(agalsidase beta)		
		Approval Timeframe:
		 Initial authorization: 6 months Continuation authorization: 1 year
		Prescriber Specialty Requirement:
		 Must be prescribed by a nephrologist, cardiologist, specialist in metabolic disorders or genetics
		genetics
		Age Limitation: none
		Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis
		Initial Criteria:
		Documentation of patient's current weight
		 Documentation confirming diagnosis of Fabry disease (e.g. alpha-Gal A activity in leukocytes or plasma, mutation analysis of the
		alpha-Gal A gene)
		The patient is either a:
		 Classically affected person assigned male at birth (i.e. a person assigned male at birth with very low or undetectable levels of alpha-galactosidase A [alphaGal
		A]), OR
		 A person assigned female at birth who is a carrier, or a person assigned male
		at birth with atypical presentations (i.e. with marginal levels of alpha-Gal A)
		with clinical manifestations of Fabry disease (e.g. renal, neurologic, cardiovascular) present
		Continuation Criteria: Continuation criteria only applies if the member is unable to safely receive the medication
		by home infusion
		Documentation confirming diagnosis
		Documentation of patient's current weight
		 Documentation showing a continued response to treatment (e.g. reduction in plasma glycosphingolipid GL-3 levels compared to baseline)
		 Patient has remained compliant with >50 percent of treatments
		 Patient regularly attends follow-up visits
		 Patient has not developed ESRD, without an option for renal transplantation, in combination with advanced heart failure (New York Heart Association class IV)
		 Patient does not have end-stage Fabry disease or other comorbidities with a life
		expectancy of <1 year
		Patient has not experienced severe cognitive decline
		Additional Information:
		 This drug is included in Priority Health's medical policy 91414 – Infusion Services and
		Equipment, which requires medications to be administered by home infusion. Home

	1	
		infusion agencies must bill the drug to the pharmacy benefit. Note: if this medication is new to the patient, Priority Health may cover up to 3 months of treatment at an outpatient hospital infusion center until safety has been established.
Fasenra prefilled syringe (benralizumab)	J0517	Approved Diagnosis: • For treatment of moderate to severe asthma with an eosinophilic phenotype • For the treatment of Eosinophilic Granulomatosis with Polyangiitis (EGPA) Approval Timeframe: • Initial authorization: 1 year Prescriber Specialty Requirement: • Must be prescribed by, or in consultation (consultation notes must be submitted) with: • a pulmonologist • an allergist • an illergist • a rheumatologist • Bight-dose inhaled corticosteroid (CS) • Hight-dose inhaled corticosteroid (CS) • Patient must have been compilant on all the following therapies for at least 3 months: • Hight-dose inhaled corticosteroid (CS) • Long-acting beta agonist (LABA) • One additional asthma controller medication (e.g., leukotriene receptor antagonist, Spiriva); AND • Hoght-dose inhaled corticosteroid (CS)
	1	

		 Documentation showing patient has had a positive clinical response (e.g., decrease in exacerbation frequency, improvement in asthma symptoms, decrease in oral corticosteroid use) <u>Additional Information</u> Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy Fasenra will not be approved if used in combination with other biologics (ex. Dupixent, Cinqair, Xolair, Tezspire, Nucala) Fasenra Syringes will only be approved under the medical benefit. Please reference the patient's pharmacy benefits for coverage of Fasenra Pen Autoinjector This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center.
Gamifant (emapalumab-lzsg)	J9210	 Approved Diagnosis: Primary hemophagocytic lymphohisticcytosis (HLH) Approval Timeframe: Initial authorization: 3 months Continuation authorization: 3 months Prescriber Specialty Requirement: none Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Documentation confirming diagnosis must be submitted; AND Patient must have previously tried and experienced clinical failure with conventional therapy (e.g. etoposide, dexamethasone, cyclosporine) Continuation Criteria: Documentation confirming diagnosis must be submitted; AND Patient must have previously tried and experienced clinical failure with conventional therapy (e.g. etoposide, dexamethasone, cyclosporine) Continuation Criteria: Documentation confirming diagnosis must be submitted; AND Patient must have previously tried and experienced clinical failure with conventional therapy (e.g. etoposide, dexamethasone, cyclosporine); AND Documentation showing objective evidence of response to therapy (i.e. normalization of HLH abnormalities) must be submitted; AND Request must include an update and/or plan for hematopoietic stem cell transplant (HSCT) Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center.
Givlaari (givosiran)	J0223	Approved Diagnosis: • Acute hepatic porphyria, including: • Acute intermittent porphyria (AIP) • Hereditary coproporphyria (HCP) • Variegate porphyria (VP) • ALA dehydratase deficient porphyria. Approval Timeframe: • Initial authorization: 6 months • Continuation authorization: up to 6 months Prescriber Specialty Requirement: none Age Limitation: Must be age 18 years or older

Ilaris (canakinumab) J0638 Approved Diagnosis: Cryopytin-Associated Periodic Syndromes (CAPS) - Familial Cold Autoinflammatory Syndrome (FCAS) - Muckle Wells Syndrome (MVS) • Periodic Fever Syndromes - Familial Cold Autoinflammatory Syndrome (HDS) - Muckle Wells Syndrome (HDS) - Hyper Immunoglobulin D Syndrome (HDS) - Merkelonate Kinase Deriodic Syndrome (TRAPS) • Muckle Wells Syndrome (HDS) - Merkelonate Kinase Deriodic Syndrome (TRAPS) • Markelonate Kinase Deriodic Syndrome (TRAPS) • Markelonate Kinase Deriodic Syndrome (TRAPS) • Aduit-Onset Still's Disease (AOSD) i • Gourt Flames • Orall Syndrome (TRAPS, SJIA, AOSD = 1 year • Gourt Flames • Initial authorization: • Orall's single dose for 12 weeks • Continuation authorization: 1 year Prescriber Specialty Requirement: none Age Limitation: See below Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Documentation confirming diagnosis Cryopyrin-Associated Periodic Syndromes (CAPS) • Patient must be 4 years or older Systemic Juvenile Idiopathic Anthritis (SJIA) and Adult-Onset Still's Disease (AOSD) • Hash had three or more flares in the last 12 months; AND • Hash had three or more flares in the last 12 months; AND • Hash had three or more flares in the last 12 months; AND • Hash had three or mo		 Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Documentation confirming diagnosis must be submitted; AND Patient must have active disease, defined as 2 documented porphyria attacks within the past 6 months (including hospitalization, urgent care visits or, IV hemin administration at home). Continuation Criteria: Documentation confirming stabilization of the disease or absence of disease progression (reduction in attacks from baseline) Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center.
	J0638	 Cryopyrin-Associated Periodic Syndromes (CAPS) Familial Cold Autoinflammatory Syndrome (FCAS) Muckle-Wells Syndrome (MWS) Periodic Fever Syndromes (MWS) Periodic Fever Syndromes (MWS) Periodic Fever Syndromes (MWD) Familial Mediterranean Fever (FMF) Hyper ImmunoglobulinD Syndrome (HIDS) Mevalonate Kinase Deficiency (MKD) Tumor Recrosis Receptor-Associated Periodic Syndrome (TRAPS) Systemic Juvenile Idiopathic Arthritis (SJJA) Adult-Onset Still's Disease (AOSD) i Gout Flares Approval Timeframe: Initial authorization: CAPS, FCAS, MWS, FMF, HIDS, MKD, TRAPS, SJIA, AOSD = 1 year Gout = single dose for 12 weeks Continuation authorization: 1 year Prescriber Specialty Requirement: none Age Limitation: See below Dosce & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria:

		 For gout flares requiring treatment beyond the initial dose, patient must be established on maintenance therapy with urate-lowering agents such as allopurinol, febuxostat, and/or probenecid Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy. Additional Information: This drug is included in Priority Health's medical policy 91414 – Infusion Services and Equipment, which requires medications to be administered by home infusion. Home infusion agencies must bill the drug to the pharmacy benefit. Note: if this medication is new to the patient Priority Health may cover up to 3 months of treatment at an outpatient hospital infusion center until safety has been established.
llumya (tildrakizumab)	J3245	Approved Diagnosis: • Plaque Psoriasis Approval Timeframe: • Initial authorization: 12 months • Continuation authorization: 12 months Prescriber Specialty Requirement: Out ust provide documentation confirming diagnosis, AND • Must provide documentation confirming diagnosis, AND • Must provide documentation showing the patient has experienced improvement or maintained stable clinical status Additional Information: • This drug is included in Priori

Imaavy (nipocalimab-aahu)	J3590 C9399	 Approved Diagnosis: Generalized myasthenia gravis (gMG) Approval Timeframe: Initial authorization: 6 months Continuation authorization: 12 months Prescriber Specialty Requirement: Prescribed by, or in consultation with, a neurologist Age Limitation: Patient must be 12 years or older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Documentation must be submitted confirming diagnosis; AND Documentation showing patient has either anti-acetylcholine receptor antibody (AChR-Ab) positive OR anti-muscle-specific tyrosine kinase (MuSK) antibody positive disease; AND Patient must have a Myasthenia Gravis Foundation of America (MGFA) Clinical Classification Class II-IV; AND Patient must have a Myasthenia Gravis Activities of Daily Living (MG-ADL) total score greater than or equal to 6; AND Documentation must be submitted showing baseline quantitative myasthenia gravis (QMG) total score; AND Documentation of progressive disease on a therapeutic trial of at least TWO of the following (over the course of at least 12 months): azathioprine, cyclosporine, mycophenolate mofetil, tacrolimus, methotrexate, cyclophospharnide; AND Documentation showing patient has required 2 or more courses of plasmapheresis/plasma exchanges and/or intravenous immune globulin for at least 12 months without symptom control Continuation Criteria: Improved (GAC) total score from baseline (at least a 2-point reduction); AND Improved (QMG) total score from baseline (at least a 3-point improvement) Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center.
Immune Globulin		Approved Diagnosis: • Hypogammaglobulinemia, unspecified • Selective IgM immunodeficiency

Primary		Other selective immunoglobulin deficiencies
Immunodeficiency		 X-linked agammaglobulinemia X-linked immunodeficiency with hyper IGM
		 Combined immunodeficiency (SCID)

Documentation confirming diagnosis. Diagnosis of the disorder must be reasonably
certain, and based on a thorough history and examination, and appropriate laboratory
testing (e.g. electromyography (EMG), spinal fluid tests, serum tests and biopsy findings;
 AND Documentation of the patient's current weight; AND
 Must provide documentation of previous treatment failures; AND
• Must provide documentation of previous treatment failures, AND
Primary Thrombocytopenia
• For treatment of acute ITP, a rapid rise in platelet count must be medically necessary.
Medically necessary means:
 Immune globulin is used before surgery and the platelet count is less than
100,000/mm3; OR
• Patient has acute bleeding and platelet count is less than 30,000/mm3; OR
 Patient is at risk for intracerebral hemorrhage (i.e. platelet is less than 20 000 (mm²)
20,000/mm3
 For treatment of chronic ITP, the patient: Must be age 10 or older; AND
 Must be age to of older, AND Must have a platelet count less than 30,000/mm for children or less than
20,000/mm3 for adults; AND
 Has illness present for more than six months; AND
 Failed, has a contraindication to, or is intolerant to corticosteroid therapy
ITP in pregnancy and fetal alloimmune thrombocytopenia
 The patient is refractory to steroids with a platelet count less than 10,000/mm3 during her third trimenter OP.
 her third trimester; OR the platelet count is less than 30,000/mm3 and associated with bleeding prior to vaginal
 the platelet count is less than 30,000/mm3 and associated with bleeding prior to vaginal delivery or C-section; OR
 The patient previously delivered infants with autoimmune thrombocytopenia; OR
 At 20 weeks gestation or later, cordocentesis reveals fetal platelets less than 20,000/
mm3; OR
Screening reveals platelet alloantibodies
Neonatal alloimmune thrombocytopenia (immune globulin is not covered for routine use)
The patient is severely thrombocytopenic (i.e. a platelet count less than 30,000/mm3)
and/or symptomatic; AND
The neonate failed, has a contraindication to, or is intolerant to platelet transfusion
Post-transfusion purpura platelet count is less than 10,000/mm3; OR
 the patient experienced bleeding complications due to thrombocytopenia
• the patient experienced bleeding complications due to thrombocytopenia
Autoimmune hemolytic anemia (immune globulin is not covered for routine use) the patient has warm-type AIHA; AND
• the patient has failed, has a contraindication to, or intolerance to corticosteroid therapy;
AND
• the patient had a splenectomy or is the patient at high risk for post-splenectomy sepsis
Immune-mediated neutropenia (immune globulin not covered for routine use)
The patient has a serious clinical infection related to neutropenia; AND
The patient failed to respond to both (1) corticosteroids and (2) filgrastim or
pegfilgrastim therapies
Anemia due to pure red cell aplasia secondary to chronic parvovirus B19 infection
The patient has severe, refractory anemia;AND
The patient has documented erythrovirus B19 viremia; AND
The patient was evaluated for underlying conditions that could lead to aplasia
Anemia due to pure red cell aplasia, immunologic subtype
 The patient failed, has a contraindication to, or is intolerant to corticosteroid therapy; AND
 The patient has failed, has a contraindication to, or is intolerant to concourse and anotypy, AND The patient has failed, has a contraindication to, or is intolerant to cyclosporine; AND
 The patient has failed, has a contraindication to, or is intolerant to cyclophosphamide
Allogeneic bone marrow or stem cell transplant
Immune globulin is used for prevention of acute graft-versus-host disease or infection (a.g. outomogalovirus): AND
 (e.g. cytomegalovirus); AND The transplant was between 0 to 99 days before starting immune globulin
- The transplant was between 0 to 33 days before starting initialie globalin

 Immune globulin is approved for allogeneic bone marrow or stem cell transplant for 3 months.
<u>Complications of transplanted solid organ (e.g. heart, kidney, liver, lung, pancreas) or bone</u> marrow transplant
Immune globulin is being used to:
 suppress panel reactive anti-HLA antibodies prior to transplantation; OR
 treat antibody mediated rejection of solid organ transplantation; OR
 prevent cytomegalovirus-induced pneumonitis
Human immunodeficiency virus infection (HIV)
 immune globulin is covered for patients with HIV to reduce significant bacterial infections
in patients age 13 or younger who also have evidence of a humoral immunologic defect*
with presence of bacterial infections.
Humoral immunologic defect means:
 recurrent serious bacterial infections despite appropriate prophylactic
antibiotic therapy; or demonstrated antibody definitions to common antigona (i.e. moscilea
 demonstrated antibody deficiency to common antigens (i.e. measles, pneumococcal, and/or H. flue type B vaccine) as demonstrated by poor
antibody titers; or
 bronchiectasis suboptimally responsive to antimicrobial and pulmonary
therapy; or
 HIV-associated thrombocytopenia despite antiretroviral therapy
<u>Continuation Criteria:</u>
 Each continuation request for immune globulin previously approved by Priority Health must include clinical progress notes providing the patient's response to immune globulin
therapy.
 Therapy may be discontinued if patient is noncompliant with medical or pharmacologic
therapy OR no demonstrable clinically significant improvement in condition has occurred
after initiation of drug therapy.
Primary Thrombocytopenia
 For renewals, achievement and maintenance of a platelet count equal to or greater than
50 x 10^9/L.
Allogeneic bone marrow or stem cell transplant
• the patient's IgG is less than or equal to 400 mg/dL; AND
• treatment duration does not exceed 360 days measured from the date of the transplant
Additional Information:
 This drug class is included in Priority Health's medical policy 91414 - Infusion Services
and Equipment, which requires all intravenous immune globulin products to be infused in
an outpatient hospital infusion center (this requirement does not apply to subcutaneous
immune globulin).
 In some situations, IVIG may be used for medically necessary indications listed on this prior authorization form for a person that has rapidly progressive disease in which a
clinical response could not be affected quickly enough using conventional agents. In
these situations, give IVIG therapy along with conventional treatment(s), but continued
administration of IVIG is not medically necessary when conventional therapy takes effect.
Any metric assessment used for objective monitoring of progress is accepted, such as
the Medical Research Council (MRC) scale (most commonly used for muscle strength),
INCAT Disability scale, and activities of daily living (ADL) measurements. Changes in
these measures must be clearly documented. Subjective or experiential improvement
alone is generally insufficient to continue IVIG or to expect coverage.
 Clinical monitoring takes clear precedence over laboratory monitoring. If clinical improvement is evident, then laboratory Clinical monitoring takes clear precedence over
laboratory monitoring. If clinical improvement is evident, then laboratory monitoring
solely to guide IVIG therapy is not medically necessary.
 If improvement does not occur with IVIG, continued infusion may not be considered
medically necessary.
The use of intravenous immunoglobulin therapy is considered medically necessary by
Priority Health for the conditions specified in the 'Approved Diagnosis' section of the prior
authorization criteria.

Immune Globulin Neurological Conditions	11551	Approved Diagnosis: • Guillain-Barré syndrome • Myasthenia gravis • Eaton-Lambert syndrome • Polyneuropathy (chronic inflammatory demyelinating) • Multifocal motor neuropathy • Stiff-man syndrome

Kanuma (sebelipase alfa)	J2840	 Approved Diagnosis: Ilysosomal acid lipase (LAL) deficiency Approval Timeframe: Initial authorization: 1 year Continuation authorization: 2 years Prescriber Specialty Requirement: none Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Documentation of diagnosis of Wolman disease or Cholesteryl ester storage disease (CESD) (later-onset disease) Diagnosis must be confirmed by genetic testing with evidence of LIPA mutation (genetic testing results must be submitted) Continuation Criteria: Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy. Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center.
Kimyrsa (oritavancin)	J2406	 Approved Diagnosis: Acute bacterial skin and skin structure infection (ABSSSI) Approval Timeframe: Initial authorization: 1 month Continuation authorization: N/A Prescriber Specialty Requirement: none Age Limitation: 18 years or older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Documentation of culture and sensitivity results must be sent to Priority Health showing the patient's infection is not susceptible to alternative antibiotic treatments Must have documented methicillin-resistant Staphylococcus aureus (MRSA) acute bacterial skin and skin structure infection (ABSSSI) that is resistant to all other MRSA sensitive antibiotics or be unable to tolerate alternatives.

disease
ht pruritis her week; a, and/or i the ht pruritis her week; acologic s occurred

Krystexxa (pegloticase)	J2507	Approved Diagnosis: • treatment-failure gout (TFG) Approval Timeframe: • Initial authorization: 3 months • Continuation authorization: 1 year Prescriber Specialty Requirement: none Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Documentation confirming diagnosis of chronic, treatment-failure gout (TFG) • Patient must have three or more flares in the last 12 months • Patient must first try allopurinol using a daily dose of 900 mg for 6 months (or probenecid or febuxostat if allopurinol is contraindicated) and be unable to maintain a serum uric acid level less than or equal to 6 mg/dL • Patient must have gout tophus or gouty arthritis • Patient must have gout tophus or gouty arthritis • Patient must not have: • unstable angina • uncontrolled arrhythmia • non-compensated heart failure • uncontrolled blood pressure (a blood pressure higher than 150/95 mmHg) • received an organ transplant • glucose-6-phosphate dehydrogenase deficiency • a need to receive dialysis
		 Continuation Criteria: After 3 months of Krystexxa therapy, the patient's serum uric acid level must remain at or below 6mg/dL. Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy. Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center.

Leqvio (inclisiran)	J1306	 Approved Diagnosis: Heterozygous familial hypercholesterolemia (HeFH) Very high risk clinical atherosclerotic cardiovascular disease (ASCVD)
		Approval Timeframe: • Initial authorization: 1 year • Continuation authorization:
		Prescriber Specialty Requirement: Must be prescribed by a cardiologist, endocrinologist, or board- certified lipidologist
		Age Limitation: none
		Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis
		 Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Documentation confirming one of the following diagnoses: Heterozygous familial hypercholesterolemia (HeFH) confirmed by one or more of the following:

Lucentis (ranibizumab)	J2778	Approved Diagnosis: • Neovascular (wet) age-related macular degeneration (AMD) • Macular edema following retinal vein occlusion (RVO) • Diabetic macular edema (DME) • Diabetic retinopathy (DR) • Myopic Choroidal Neovascularization (mCNV) Approval Timeframe: • Initial authorization: 1 year • Continuation authorization: 1 year
		Prescriber Specialty Requirement: none
		Age Limitation: none
		Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis
		Initial Criteria: • Documentation confirming diagnosis • Patients currently receiving treatment with Lucentis and who have demonstrated an adequate response are not required to try Avastin. Neovascular (wet) age-related macular degeneration (AMD): • Must first try Avastin (bevacizumab) for at least 3 consecutive months with failure to
		effectively improve baseline visual acuity and/or reduce fluid • Avastin is not required if patient has serous pigment epithelial detachment (PED), hemorrhagic PED, subretinal hemorrhage, or posterior uveal bleeding syndrome.
		 Macular edema following retinal vein occlusion (RVO) Must first try Avastin (bevacizumab) for at least 3 consecutive months with failure to effectively improve baseline visual acuity and/or reduce fluid
		 <u>Diabetic macular edema (DME)</u> Must first try Avastin (bevacizumab) for at least 3 consecutive months with failure to effectively improve baseline visual acuity and/or reduce fluid
		 <u>Diabetic retinopathy (DR)</u> Must first try Avastin (bevacizumab) for at least 3 consecutive months with failure to effectively improve baseline visual acuity and/or reduce fluid
		 Myopic Choroidal Neovascularization (mCNV) Lucentis for mCNV may be authorized for a maximum of 1 injection per month up to a maximum of 3 months
		 Continuation Criteria: Documentation confirming diagnosis Documentation showing the disease response as indicated by

Lumizyme (alglucosidase alfa)	J0221	Approved Diagnosis: • Pompe disease
		 Approval Timeframe: Initial authorization: 3 months Continuation authorization: 1 year
		Prescriber Specialty Requirement: must be prescribed by or in consultation with a physician who specializes in the treatment of inherited metabolic disorders.
		Age Limitation: none
		Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis
		 Initial Criteria: Documentation confirming diagnosis of Pompe disease (acid alpha-glucosidase [GAA] deficiency) that is supported by enzyme assay or DNA testing (documentation must be submitted) Documentation of patient's current weight Documented baseline values for one or more of the following:
		Continuation Criteria: Continuation criteria only applies if the member is not able to safely receive the medication by home infusion, • Documentation that patient cannot safely receive the medication by home infusion; AND
		 Documentation that patient cannot safely receive the medication by nome infusion, AND Documentation confirming diagnosis of Pompe disease (acid alpha-glucosidase [GAA] deficiency) that is supported by enzyme assay or DNA testing (documentation must be submitted); AND Documentation of patient's current weight; AND
		 Patient has demonstrated a beneficial response to therapy compared to pretreatment baseline in one or more of the following: (Baseline and current values must be submitted) Infantile-onset disease: muscle weakness, motor function, respiratory function, cardiac involvement, percent predicted forced vital capacity (FVC), and/or 6-minute walk test (6MWT); OR Late-onset (non-infantile) disease: FVC and/or 6 MWT; AND Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy.
		 Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be administered by home infusion. Home infusion agencies must bill the drug to the pharmacy benefit. Note: if this medication is new to the patient, Priority Health may cover up to 3 months of treatment at an outpatient hospital infusion center until safety has been established. For adult patients, doses should be rounded down to the nearest vial size within 10% of the calculated dose Lumizyme will not be covered in combination with Nexviazyme®

Naglazyme	J1458	Approved Diagnosis: Maroteaux-Lamy syndrome
(galsulfase)		
		Approval Timeframe:
		 Initial authorization: 6 months Continuation authorization: 1 year
		Prescriber Specialty Requirement: none
		Age Limitation: none
		Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis
		Initial Criteria:
		 Documentation confirming diagnosis of Maroteaux-Lamy syndrome, AND Documentation of the patient's current weight
		Continuation Criteria:
		Continuation criteria only applies if the member is not able to safely receive the medication by home infusion;
		 Documentation that patient cannot safely receive the medication by home infusion; AND Documentation confirming diagnosis; AND
		Documentation of patient's current weight; AND
		 Documentation showing the patient has demonstrated a beneficial response to therapy by at least one of the following:
		by at least one of the following: o Disease stabilization
		 Improvement in 12-minute walk test
		Additional Information:
		 This drug is included in Priority Health's medical policy 91414 – Infusion Services and Equipment, which requires medications to be administered by home infusion. Home
		infusion agencies must bill the drug to the pharmacy benefit. Note: if this medication is
		new to the patient, Priority Health may cover up to 3 months of treatment at an outpatient
		hospital infusion center until safety has been established.

Nexviazyme (avalglucosidase alfa-ngpt)	J0219	Approved Diagnosis: • late-onset Pompe disease Approval Timeframe: • Initial authorization: 3 months • Continuation authorization: 1 year Prescriber Specialty Requirement: must be prescribed by or in consultation with a physician who
		specializes in the treatment of inherited metabolic disorders. Age Limitation: none
		Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis
		 Initial Criteria: Documentation confirming diagnosis of late-onset Pompe disease (acid alpha-glucosidase[GAA] deficiency) that is supported by enzyme assay or DNA testing (documentation must be submitted) Documentation of patient's current weight Documented baseline values for FVC and/or 6 MWT

Nplate (romiplostim)	J2802	 Approved Diagnosis: chronic immune (idiopathic) thrombocytopenic purpura (ITP) severe, persistent, or recurrent ITP
		Approval Timeframe: • Initial authorization: 3 months • Continuation authorization: 1 year
		Prescriber Specialty Requirement: none
		Age Limitation: none
		Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis
		 Initial Criteria: Documentation confirming diagnosis; AND Documentation of the patient's current weight
		 <u>Chronic immune (idiopathic) thrombocytopenic purpura (ITP)</u> platelet count <30,000/microL; AND significant bleeding symptoms
		 severe, persistent or recurrent ITP platelet count <20,000/microL; AND an insufficient response to corticosteroids, immunoglobulin, or splenectomy, OR patient is not a candidate for splenectomy or immunoglobulin therapy
		 Continuation Criteria: Documentation confirming diagnosis, AND Documentation of patient's current weight, AND Documentation showing the patient has demonstrated a beneficial response to therapy by one of the following:
		to therapy (i.e., reduction in clinically significant bleeding events)
		 Additional Information: Nplate (romiplostim) is not covered in combination with another thrombopoietin receptor agonist [e.g., Promacta (eltrombopag)] AND cannot be used in an attempt to normalize platelet counts

Nulibry (fosdenopterin hydrobromide)	C9399 J3490	 Approved Diagnosis: Reduce the risk of mortality in patients with molybdenum cofactor deficiency (MoCD) Type A Approval Timeframe: Initial authorization: 6 months Continuation authorization: 12 months Prescriber Specialty Requirement: specialist in inborn errors of metabolism Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Documentation must be submitted confirming diagnosis of MoCD Type A by genetic testing Must be prescribed by a specialist in inborn errors of metabolism Continuation Criteria: Documentation of a positive clinical response to Nullibry (neurological function, gross motor function, developmental milestones, etc.) Documentation showing patient is tolerating therapy Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy.
Ocrevus (ocrelizumab) Ocrevus Zunovo (ocrelizumab and hyaluronidase-ocsq)	J2350 J2351	 Approved Diagnosis: Primary Progressive MS Relapsing-remitting MS Approval Timeframe: Initial authorization: 2 years Continuation authorization: 2 years Prescriber Specialty Requirement: Neurologist or specialist in MS Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Documentation confirming diagnosis of: Primary Progressive Multiple Sclerosis (PPMS) Relapsing-Remitting [RRMS] or Secondary Progressive multiple sclerosis Continuation Criteria: Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy. Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center. Ocrevus will not be approved in combination with any other disease modifying therapy for multiple sclerosis

Omvoh (mirikizumab-mrkz)	J2267	Approved Diagnosis: • Ulcerative Colitis Approval Timeframe: • • Initial authorization: 3 months (3 doses) • Continuation authorization: N/A Prescriber Specialty Requirement: Prescribed by or in consultation with a gastroenterologist Age Limitation: Must be age 18 years or older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • • Documentation confirming diagnosis of moderately to severely active ulcerative colitis (UC); AND • Must have a documented trial and documented therapeutic failure with Humira; AND
		 Must provide documentation of patient's current weight Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center. When used for ulcerative colitis, three IV induction doses given at weeks 0, 4, and 8 will be covered under the medical benefit. Subsequent maintenance doses will be covered under the medical benefit. Subsequent maintenance doses will be covered under the medical benefit. Subsequent maintenance doses will be covered under the pharmacy benefit. Refer to the Medicaid Approved Drug List for coverage

Onapgo (apomorphine hydrochloride)	J3490 C9399	Approved Diagnosis: • Advanced Parkinson's disease Approval Timeframe: • Initial authorization: 1 year • Continuation authorization: 1 year Prescriber Specialty Requirement: Prescribed by or in consultation with a neurologist Age Limitation: 18 years and older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Diagnosis of Parkinson's disease that is levodopa-responsive; AND • Patient is receiving optimal carbidopa/levodopa containing therapy (e.g., has tried extended-release tablets and multiple daily dosing); AND • Prescriber attests that the patient is experiencing persistent motor fluctuations with a minimum of 3 hours of "off" time per day despite optimized carbidopa/levodopa therapy; AND • Therapeutic trial and failure of, or intolerance/contraindication to, adjunctive therapy with a dopamine agonist (e.g. pramipexole, ropinirole) Continuation Criteria: • Documentation that the patient has experienced a positive clinical response compared to baseline • Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy.
Onpattro (patisiran)	J0222	Approved Diagnosis: • Hereditary transthyretin-mediated amyloidosis (hATTR) with polyneuropathy Approval Timeframe: • Initial authorization: 12 months • Continuation authorization: 12 months Prescriber Specialty Requirement: none Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Documentation confirming diagnosis must be submitted; AND • Genetic testing confirms a transthyretin (TTR) mutation (e.g., V30M); AND • Must have presence of clinical signs and symptoms of the condition (e.g., motor disability, peripheral/autonomic neuropathy, etc.); AND • Must have documentation of one of the following: • Baseline polyneuropathy disability (PND) score ≤ IIIb • Baseline FAP Stage 1 or 2; AND • Patient is not receiving Onpattro in combination with tafamidis (Vyndaqel, Vyndamax), Wainua, Amvuttra or Attruby; AND • Patient has not had a liver transplant Continuation Criteria: • Must provide documentation confirming diagnosis, AND • Documentation that the patient continues to have one of the following: • Polyneuropathy disability (PND) score ≤ IIIb, or • FAP Stage 1 or 2; AND • Documentation that the patient continues to have one of the following: • Polyneuropathy

		 Patient is not receiving Onpattro in combination with tafamidis (Vyndaqel, Vyndamax), Wainua, Amvuttra or Attruby; AND Patient has not had a prior liver transplant Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center.
Opfolda (miglustat)	J1202	Approved Diagnosis: • late-onset Pompe disease Approval Timeframe: • Initial authorization: 1 year Prescriber Specialty Requirement: Must be prescribed by or in consultation with a specialist for the condition (such as genetic and metabolic specialist, neurologist, cardiologist, pediatrician) Age Limitation: 18 years or older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Must have a diagnosis of late-onset Pompe disease (LOPD) that is supported by enzyme assay or DNA testing (supporting documentation must be submitted to Priority Health) • Documentation of the patient's current weight must be submitted • Documentation of baseline percent-predicted forced vital capacity (FVC) and 6-minute walk test (6MWT) must be submitted • Opfolda must be used in combination with Pombiliti • Patient must hort require the use of invasive or noninvasive ventilation support for > 6 hours/day while awake Continuation Oriteria: • Documentation of percent-predicted FVC and/or 6MWT Additional Information: • Opfolda is not covered in combination with Lumizyme or Nexviazyme

Orbactiv (oritavancin)	J2407	 <u>Approved Diagnosis:</u> Acute bacterial skin and skin structure infection (ABSSSI)
(entar anony		Approval Timeframe:
		Initial authorization: 1 month
		Continuation authorization: N/A
		Prescriber Specialty Requirement: none
		Age Limitation: 18 years or older
		Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis
		 Initial Criteria: Documentation of culture and sensitivity results must be sent to Priority Health show the patient's infection is not susceptible to alternative antibiotic treatments Must have documented methicillin-resistant Staphylococcus aureus (MRSA) acute bacterial skin and skin structure infection (ABSSSI) that is resistant to all other MRSA sensitive antibiotics or be unable to tolerate alternatives.
Orencia IV	J0129	Approved Diagnosis:
(abatacept)		 Rheumatoid Arthritis (RA) Polyarticular Juvenile Idiopathic Arthritis (PJIA) Psoriatic Arthritis (PsA)
		 Prophylaxis of acute graft versus host disease (aGVHD)
		Approval Timeframe:
		 Initial authorization: 2 years Continuation authorization: 2 years
		Prescriber Specialty Requirement: none
		Age Limitation:
		RA: age 18 years and older RIA: age 2 years and older
		 PJIA: age 2 years and older PsA: age 18 years and older
		• aGVHD: age 2 years and older
		Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis
		Initial Criteria: Pheumatoid Arthritic (PA) & Repriatic Arthritic (PsA)
		 <u>Rheumatoid Arthritis (RA) & Psoriatic Arthritis (PsA)</u> Must provide documentation confirming diagnosis, AND
		Must provide the patient's current weight, AND
		Must have a documented trial and documented therapeutic failure with infliximab
		Polyarticular Juvenile Idiopathic Arthritis
		 Must provide documentation confirming diagnosis, AND Must provide patient's current weight
		Prophylaxis of acute graft versus host disease (aGVHD)
		 must be used in combination with a calcineurin inhibitor and methotrexate; AND the member is undergoing hometopointic stem call transplantation (HSCT) from a
		 the member is undergoing hematopoietic stem cell transplantation (HSCT) from a matched or 1 allele-mismatched unrelated-donor

		Continuation Criteria:
		 Must provide documentation confirming diagnosis, AND Must provide the patient's current weight, AND Must provide documentation showing the patient has experienced improvement or maintained stable clinical status Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy. Additional Information: The subcutaneous form of this drug will not be covered under the medical benefit. Refer to the Approved Drug List (ADL) for coverage under the pharmacy benefit. This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center.
Oxlumo (lumasiran)	J0224	Approved Diagnosis: • Primary Hyperoxaluria Type 1 (PH1) with AGXT (alanine:glyoxylate aminotransferase gene) mutation Approval Timeframe: • Initial authorization: 12 months • Continuation authorization: 12 months Prescriber Specialty Requirement: none Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Documentation must be submitted confirming diagnosis of PH1 with AGXT mutation • Patient must not have history of kidney or liver transplant • Documentation showing the patient has made efforts to increase fluid intake to at least 3 L/m2 BSA per day. • Patient must not have history of kidney or liver transplant • Documentation showing the patient has made efforts to increase fluid intake to at least 3 L/m2 BSA per day. • Patient has completed a trial of at least 3 consecutive months with pyridoxine resulting in no significant improvement observed (e.g. <30% reduction in urine oxalate concentration after at least 3 months of therapy) Continuation Criteria: • Documentation must be submitted confirming diagnosis of PH1 with AGXT mutation • Patient must not have history of kidney or liver transplant • Documentation must be submitted confirming diagnosis of PH1 with AGXT mutation • Patient must not have history of kidney or liver transplant • Documentation tha

		 This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center.
Pavblu (aflibercept-ayyh)	Q5147	 Approved Diagnosis: Neovascular (wet) age-related macular degeneration (AMD) Macular edema following retinal vein occlusion (RVO) Diabetic macular edema (DME) Diabetic retinopathy Retinopathy of Prematurity (ROP) Approval Timeframe: Initial authorization: 1 year Continuation authorization: 1 year Prescriber Specialty Requirement: none Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Documentation confirming diagnosis Patients currently receiving treatment with Pavblu and who have demonstrated an adequate response are not required to try Avastin Neovascular (wet) age-related macular degeneration (AMD): Must first try Avastin (bevacizumab) for at least 3 consecutive months with failure to effectively improve baseline visual acuity and/or reduce fluid Avastin is not required if patient has serous pigment epithelial detachment (PED), hemorrhagic PED, subretinal hemorrhage, or posterior uveal bleeding syndrome Macular edema following retinal vein occlusion (RVO) Must first try Avastin (bevacizumab) for at least 3 consecutive months with failure to effectively improve baseline visual acuity and/or reduce fluid Diabetic macular edema (DME) with baseline visual acuity 20/50 or worse

		 Documentation of baseline best-corrected visual acuity (BCVA) score must be included with request <u>Diabetic macular edema (DME) with baseline visual acuity better than 20/50</u> Must first try Avastin (bevacizumab) for at least 3 consecutive months with failure to effectively improve baseline visual acuity and/or reduce fluid <u>Diabetic retinopathy</u> Must first try Avastin (bevacizumab) for at least 3 consecutive months with failure to effectively improve baseline visual acuity and/or reduce fluid <u>Retinopathy of Prematurity (ROP)</u> Diagnosis of Retinopathy of Prematurity (ROP) <u>Continuation Criteria</u> Documentation confirming diagnosis Documentation showing the disease response as indicated by: stabilization of visual acuity, or improvement in BCVA score when compared to baseline
PiaSky (crovalimab-akkz)	J1307	 Approved Diagnosis: Paroxysmal Nocturnal Hemoglobinuria (PNH) Approval Timeframe: Initial authorization: 6 months Continuation authorization: 1 year Prescriber Specialty Requirement: none Age Limitation: 13 years or older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Patient must have a body weight of >40 kg Documentation must be submitted confirming diagnosis of PNH by both of the following: Flow cytometry analysis confirming presence of PNH clones AND Laboratory results, signs, and/or symptoms attributed to PNH (e.g. LDH >1.5 × ULN, Hb <10 g/dL, abdominal pain, anemia, dyspnea, extreme fatigue, unexplained/ unusual thrombosis, etc.) Continuation Criteria: Documentation of positive clinical response to PiaSky therapy including an increased or stabilization of Hb levels, reduction in transfusions, or improvement in hemolysis. Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be administered by home infusion. Home infusion agencies must bill the drug to the pharmacy benefit. Note: if this medication is new to the patient, Priority Health may cover up to 3 months of treatment at an outpatient hospital infusion center until safety has been established. PiaSky will not be covered in combination with another complement inhibitor for the treatment of PNH (Empaveli, Soliris, Ultomiris, Fabhalta, Voydeya)

Pombiliti (cipaglucosidase alfa)	J1203	 Approved Diagnosis: late-onset Pompe disease Approval Timeframe: Initial authorization: 1 year Continuation authorization: 1 year Prescriber Specialty Requirement: Must be prescribed by or in consultation with a specialist for the condition (such as genetic and metabolic specialist, neurologist, cardiologist, pediatrician) Age Limitation: 18 years or older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Must have a diagnosis of late-onset Pompe disease (LOPD) that is supported by enzyme assay or DNA testing (supporting documentation must be submitted to Priority Health) Documentation of the patient's current weight must be submitted Documentation of baseline percent-predicted forced vital capacity (FVC) and 6-minute walk test (6MWT) must be submitted Patient must be used in combination with Opfolda Patient must not require the use of invasive or noninvasive ventilation support for > 6 hours/day while awake Continuation Criteria: Documentation of response to therapy, as evidenced by an improvement, stabilization, or slowing of progression of percent-predicted FVC and/or 6MWT Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be administered in an outpatient hospital infusion center. Pombiliti is not covered in combination with Lumizyme or Nexviazyme

Prolia (denosumab)	J0897	Approved Diagnosis: • Osteoporosis • Increase bone mass in patients with cancer Approval Timeframe: • Initial authorization: 1 year • Continuation authorization: 1 year Prescriber Specialty Requirement: none Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Must have a diagnosis of osteoporosis (a person assigned male at birth or postmenopausal person assigned female at birth with T-score of s-2.5 or T-score > -2.5 with fragility fracture); AND • Must have a documented treatment failure or ineffective response** to a minimum of a 12-month trial with an oral bisphosphonate (e.g., alendronate, risedronate or ibandronate) OR zoledronic acid (generic Reclast); OR • Must have a documented contraindication* to BOTH oral bisphosphonates (e.g., alendronate, risedronate or ibandronate) AND zoledronic acid (generic Reclast); OR • Must have a documented treatment failure or ineffective response** to a minimum of a 12-month trial with an oral bisphosphonate (e.g., alendronate, risedronate or ibandronate) AND zoledronic acid (generic Reclast); OR • Must have a documented treatment failure or ineffective response** to a minimum of a 12-month trial with an oral bisphosphonate (e.g., alendronate, risedronate or ibandronate) OR zoledronic acid (generic Reclast); OR • Must have a documented contraindication* to BOTH oral bisphosphonate, risedronate or ibandronate) OR zoledronic acid (generic Reclast)

		 Documented pre-existing gastrointestinal disorder such as inability to swallow, esophageal stricture, or achalasia **Ineffective response is defined as one of the following: Decrease in T-score in comparison to previous T-score from DEXA scan; OR New fracture while on therapy Continuation Criteria: Must have a positive clinical response to Prolia as one of the following: T-score is stable or improved while using Prolia; OR No new fractures have occurred while using Prolia; AND Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy. Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be administered in an outpatient hospital infusion center. Prolia is not covered in combination with other injectable drugs for the treatment of osteoporosis (e.g., Evenity, Tymlos, Forteo).
Qutenza (capsaicin)	J7336	 Approved Diagnosis: Neuropathic pain associated with postherpetic neuropathy Pain associated with diabetic peripheral neuropathy Approval Timeframe: Initial authorization: 1 year Continuation authorization: 1 year Prescriber Specialty Requirement: none Age Limitation: age 18 years or older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Must have tried ALL the following for at least a period of 3 months Gabapentin Lyrica One generic tricyclic antidepressant (amitriptyline, amoxapine, doxepin, imipramine, nortriptyline, protriptyline, or trimipramine) Oxycodone CR or morphine CR or Lidocaine 5% Patch
Radicava (edaravone)	J1301	Approved Diagnosis: • "definite" or "probable" amyotrophic lateral sclerosis (ALS) Approval Timeframe: • Initial authorization: 6 months • Continuation authorization: 6 months Prescriber Specialty Requirement: Prescriber Specialty Require

		 Initial Criteria: Clinical documentation confirming diagnosis of "definite" or "probable" amyotrophic lateral sclerosis (ALS) as defined by the revised El Escorial World Federation of Neurology/Arlie House criteria Living independently Baseline ALS functional rating scale (ALSFRS-R); Completed copy of ALSFRS-R must be included with request Forced vital capacity (FVC) ≥ 80% Must be used in combination with riluzole unless there is documentation of intolerance or contraindication to riluzole Continuation Criteria: Documentation that the patient has experienced a positive clinical response compared to baseline (e.g., slowing of disease progression) FCV of greater than or equal to 30%, does not require tracheostomy/artificial ventilation, and is not on continuous Bilevel Positive Airway Pressure (BiPAP) Able to self-feed Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy.
Reblozyl (luspatercept-aamt)	J0896	 Approved Diagnosis: anemia due to beta-thalassemia myelodysplastic syndromes (MDS) Approval Timeframe: Initial authorization: 12 weeks Continuation authorization: 12 months Prescriber Specialty Requirement: an oncologist/hematologist OR another board-certified prescriber with qualifications to treat the specified disease Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Must be used for the treatment of transfusion-dependent* adult patients with anemia due to beta-thalassemia or myelodysplastic syndromes (MDS) who require red blood cell transfusion-free period for at least 35 days during that period. Continuation Criteria: Patient has experienced a reduction in transfusion requirements from pretreatment baseline of at least 2 units PRBC while receiving Reblozyl; AND Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy. Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center. Reblozyl will not be covered in combination with imetelstat (Rytelo)
Remodulin (treprostinil)	J3285	Approved Diagnosis: pulmonary arterial hypertension (PAH)

		Approval Timeframe: • Initial authorization: 1 year • Continuation authorization: 2 years Prescriber Specialty Requirement: none Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Documentation confirming diagnosis of pulmonary arterial hypertension (PAH), (World Health Organization Group 1), AND • Member has WHO functional Class II or greater symptoms prior to therapy initiation • Documentation to support diagnosis, such as pre-treatment right heart catheterization with the following results: • MPAP ≥ 25mmHg • PCWP ≥ 15 mmHg • PCWP ≥ 3 Wood units Continuation Criteria: • • Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy.
Rethymic (allogeneic processed thymus tissue-agdc)	C9399 J3590	Approved Diagnosis: • congenital athymia Approval Timeframe: • Initial authorization: One time per life of member • Continuation authorization: N/A Prescriber Specialty Requirement: • Must be prescribed by a specialist for the condition Age Limitation: < 3 years
Rezzayo (rezafungin)	J0349	Approved Diagnosis: • Candidemia • invasive candidiasis

		 Approval Timeframe: Initial authorization: Maximum of 4 weeks Continuation authorization: N/A Prescriber Specialty Requirement: Must be prescribed by, or in consultation with, an oncologist, infectious disease specialists, or an internal medicine specialists Age Limitation: 18 years or older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Must provide documentation confirming diagnosis: Must have documentation of culture & sensitivities that support that the patient has limited or no alternative options for the treatment of candidemia and invasive candidiasis, including ruling out the use of oral fluconazole Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center.
Ryoncil (remestemcel-L-rknd)	C9399 J3590	Approved Diagnosis: • grade B – D aGVHD Approval Timeframe: • Initial authorization: 4 weeks (8 doses) • Continuation authorization: up to 4 weeks (8 doses) Prescriber Specialty Requirement: • Must be prescribed by, or in consultation with, a clinically appropriate provider (oncologist, hematologist, BMT specialist, or other qualified prescriber.) Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Must provide documentation confirming diagnosis of grade B – D aGVHD confirmed by: • symptoms involving skin, liver, and/or GI tract (excluding skin-only grade B aGVHD); AND • Steroid resistant (progression within 3 days or no improvement within 7 days of consecutive treatment with 2 mg/kg/day methylprednisolone or equivalent; AND • If patient is ≥ 12 years of age, must have a documented failure to Jakafi (Not applicable to those ≥ 2 months of age to <12 years of age)

Ryplazim (plasminogen, human-tvmh)	J2998	 Approved Diagnosis: Plasminogen deficiency type 1 (hypoplasminogenemia) Approval Timeframe: Initial authorization: 12 weeks Continuation authorization: 12 months Prescriber Specialty Requirement: Must be prescribed by or in consultation with a hematologist Age Limitation: none Dese & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Genetic testing confirming diagnosis of PLGD type 1 (supporting documentation must be submitted to Priority Health) Documentation of patient's baseline plasminogen activity level (s45%) must be submitted Documentation showing lesions (external and/or internal) and symptoms are present Continuation criteria only applies if the member is not able to safely receive the medication by home infusion Documentation that patient cannot safely receive the medication by home infusion Documentation of improvement in the number and/or size of lesions Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy. Additional Information: This drug is included in Priority Health's medical policy 91414- Infusion Services and Equipment, which requires medications to be administered by home infusion. Home infusion agencies must bill the drug to the pharmacy benefit. Note: if this medication is new to the patient, Priority Health may cover up to 3 months of treatment at an outpatient hospital infusion center until safety has been established.

Rystiggo (rozanolixizumab- noli)	J9333	Approved Diagnosis: • generalized Myasthenia Gravis (gMG) Approval Timeframe: • Initial authorization: 10 months • Continuation authorization: 12 months Prescriber Specialty Requirement: • Prescribed by or in consultation with a neurologist Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Must provide documentation confirming diagnosis: • Anti-acetylcholine receptor antibody [AChR-Ab]; OR • Anti-acetylcholine receptor antibody [AChR-Ab]; OR • Anti-acetylcholine receptor antibody [AChR-Ab]; OR • Documentation of Myasthenia Gravis Foundation of America (MGFA) Clinical Classification Class II-IV; AND • Documentation of Myasthenia Gravis Activities of Daily Living (MG-ADL) total score greater than or equal to 3; AND • Documentation of baseline quantitative myasthenia gravis (QMG) total score; AND • Documentation of baseline quantitative myasthenia gravis (QMG) total score; AND • Documentation of progressive disease on a therapeutic trial of at least TWO of the following over the course of at least 12 months: • Azathioprine • cyclosporine • cyclosporine • cyclosphenaliter modelite mofetil • tacrolimus • methotrexate

		 This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center. Rystiggo will not be covered in combination with Intravenous/Subcutaneous Immune Globulin, Soliris, Ultomiris, or Vyvgart.
Scenesse (afamelanotide implant)	J7352	Approved Diagnosis: • erythropoietic protoporphyria (EPP) Approval Timeframe: • Initial authorization: 1 year • Continuation authorization: 1 year Prescriber Specialty Requirement: none Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Must be using for a diagnosis of erythropoietic protoporphyria (EPP). • Genetic testing must be included with request confirming diagnosis of EPP • Must have characteristic symptoms of EPP phototoxicity • Will not be covered in patients with the following: • current basal cell carcinoma • squamous cell carcinoma • geuanous cell carcinoma • Therapy may be discontinued if patient is noncompliant or premalignant skin lesions or personal history of melanoma; or in any other photodermatosis (i.e. solar uticaria, polymorphic light eruption, discoid lupus erythematosus). Continuation Criteria: • Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy. Additional Information: • Covered for a maximum of 4 implants per year • This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications
Signifor LAR (pasireotide)	J2502	Approved Diagnosis: • Acromegaly • Cushing's disease Approval Timeframe: • Initial authorization: 1 year • Continuation authorization: N/A Prescriber Specialty Requirement: none

		Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Must be used for treatment of acromegaly • Must have inadequate response to surgery, unless surgery is not an option • Must first try Sandostatin LAR • Must have a diagnosis of Cushing's disease • Documentation of failed pituitary surgery or contraindication to surgery • Documented trial and failure with ketoconazole to reduce cortisol secretion Continuation Criteria: • Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy. Additional Information:
		 This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center.
Simponi ARIA (golimumab)	J1602	Approved Diagnosis: • Rheumatoid Arthritis (RA) • Polyarticular Juvenile Idiopathic Arthritis (PJIA) • Psoriatic Arthritis (PsA) • Ankylosing Spondylitis (AS) Approval Timeframe: • Initial authorization: 2 years • Continuation authorization: 2 years • Continuation authorization: 2 years Prescriber Specialty Requirement: none Age Limitation: age 2 years or older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Rheumatoid Arthritis (RA) • Must provide documentation confirming diagnosis, AND • Must provide documented trial and documented therapeutic failure with infliximab Polyarticular Juvenile Idiopathic Arthritis (PJIA) • Must provide documentation confirming diagnosis, AND • Must provide documentation confirming diagnosis, AND • Must provide documentation confirming diagnosis, AND • Must provide documented trial and documented therapeutic failure with infliximab Polyarticular Spondylitis (AS) • Must provide patient's current weight, AND • M

		 The subcutaneous form of this drug will not be covered under the medical benefit. Refer to the Approved Drug List (ADL) for coverage under the pharmacy benefit. This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center. Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy.
Sivextro IV (tedizolid)	J3090	Approved Diagnosis: • Bacterial skin and skin structure infections due to gram-positive organisms Approval Timeframe: • Initial authorization: 6 doses • Continuation authorization: N/A Prescriber Specialty Requirement: none Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Diagnosis of non-purulent cellulitis: • Trial, failure, or intolerance to first line beta-lactam therapy, AND • Trial, failure, or intolerance to the least two of the following agents: clindamycin, sufamethoxazole/trimethoprim (SMZ/TMP), tetracycline (minocycline or doxycycline), OR • Culture and sensitivity results demonstrate resistance to first line agents, OR • Contraindication or intolerance to all other treatment options • Diagnosis of purulent cellulitis, abscess, or wound infection: • Trial, failure, or intolerance to lease two of the following agents: clindamycin, sufamethoxazole/trimethoprim (SMZ/TMP), tetracycline (minocycline or doxycycline), OR • Culture and sensitivity results demonstrate resistance to first line agents, OR • Criticure and sensitivity results demonstrate resistance to first line agents, OR • Diagnosis of purulent cellulitis, abscess, or wound infection: • Trial, failure, or intolerance to all other treatment options • Contraindication or intolerance to

Skyrizi IV (risankizumab-rzaa)	J2327	 Approved Diagnosis: Crohn's Disease Ulcerative Colitis Approval Timeframe: Initial authorization: 2 months, total of 3 doses Continuation authorization: N/A Prescriber Specialty Requirement: prescribed by, or in consultation with, a gastroenterologist or rheumatologist Age Limitation: age 18 years or older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Documentation confirming diagnosis; AND Must have a documented trial and documented therapeutic failure with Humira Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center. When used for Crohn's disease OR Ulcerative Colitis, three IV induction doses will be covered under the medical benefit. Subsequent maintenance doses will only be covered under the medical benefit. Subsequent maintenance doses will only be covered under the pharmacy benefit - see Medicaid Approved Drug List for coverage details.

Soliris (eculizumab)	J1299	Approved Diagnosis: • Atypical hemolytic uremic syndrome (aHUS) • Paroxysmal nocturnal hemoglobinuria (PNH) • Refractory generalized myasthenia gravis (MG) • Neuromyelitis optica spectrum disorder (NMOSD) Approval Timeframe: • Initial authorization: 6 months (12 weeks for myasthenia gravis) • Continuation authorization: 1 year Prescriber Spacialty Requirement: see below Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Documentation confirming diagnosis Paroxysmal nocturnal hemoglobinuria (PNH) • Must have flow cytometric confirmation ≥ 10% granulocyte clone cells; OR • Have symptoms of thromboembolic complications (abdominal pain, shortness of breath, chest pain, end organ damage) Atypical hemolytic uremic syndrome (aHUS) • Shiga toxin-related HUS and Thrombotic Thrombocytopenia Purpura (TTP) must be ruled out • Myasthenia Gravis Foundation of America (MGFA) Clinical Classification Class II = IV • Myasthenia Gravis Activities of Daily Living (MG-ADL) total score greater than or equal to 6 • Provide baseline quantitative myasthenia gravis (QMG) total score • Provide baseline quantitative myasthenia gravis (QMG) total score • Provide baseline quantitative myasthenia gravis (QMG) total s

		 Prescribed by or in concultation with a neurologist
		 Prescribed by or in consultation with a neurologist
		 Neuromyelitis optica spectrum disorder (NMOSD) Documentation confirming diagnosis of neuromyelitis optica spectrum disorder (NMOSD) Must be anti-aquaporin-4 (AQP4) antibody positive (documentation must be provided) Must have had at least one attack requiring rescue therapy in the last year or two attacks requiring rescue therapy in the last 2 years. Must be prescribed by or in consultation with a neurologist Must have progressive disease on a therapeutic trial of rituximab, inebilizumab (Uplizna) AND satralizumab (Enspryng). Expanded Disability Status Scale (EDSS*) score of ≤7.
		Continuation Criteria:
		 Paroxysmal nocturnal hemoglobinuria (PNH) Must have a decrease in disabling symptoms Hemoglobin levels must be stabilized Patient has experienced an improvement in fatigue and quality of life
		continued >
Soliris (eculizumab)	J1299	 <u>Atypical hemolytic uremic syndrome (aHUS)</u> Must have decreased signs of thrombotic microangiopathy (normalization of platelet counts and LDH levels, reduction in serum creatinine)
		 <u>Refractory generalized myasthenia gravis (MG)</u> Must have documented response as evidenced by BOTH of the following: Improved MG-ADL total score from baseline Improved (QMG) total score from baseline
		 <u>Neuromyelitis optica spectrum disorder (NMOSD)</u> Documentation of a decrease in relapse rate.
		 Additional Information: This drug is included in Priority Health's medical policy 91414 – Infusion Services and Equipment, which requires medications to be administered by home infusion. Home infusion agencies must bill the drug to the pharmacy benefit. Note: if this medication is new to the patient, Priority Health may cover up to 3 months of treatment at an outpatient hospital infusion center until safety has been established. Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy. Soliris will not be covered in combination with Ultomiris Intravenous/subcutaneous Immune Globulin, Rystiggo, or Vyvgart.

Supprelin LA (histrelin acetate implant)	J9226	 Approved Diagnosis: Central Precocious Puberty (CPP) Approval Timeframe: Initial authorization: 1 year Continuation authorization: 1 year Prescriber Specialty Requirement: none Age Limitation: minimum age: 2 years maximum age: for a person assigned female at birth: 11 years for a person assigned male at birth: 12 years Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Documentation confirming diagnosis Continuation confirming diagnosis Must provide documentation showing the patient has experienced improvement or maintained stable clinical status Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be given in an outpatient hospital infusion center. Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy QR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy.
Syfovre (pegcetacoplan intravitreal injection)	J2781	Approved Diagnosis: • Geographic atrophy of the macula secondary to age-related macular degeneration Approval Timeframe: • Initial authorization: 1 year • Continuation authorization: 1 year • Prescriber Specialty Requirement: must be prescribed by, or in consultation with, an ophthalmologist Age Limitation: none

		 Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Documentation confirming diagnosis must be submitted Visual acuity in the affected eye(s) must be 20/320 or better Continuation Criteria: Documentation must be submitted showing disease responses as indicated by: reduction in GA lesion growth Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy. Additional Information: Initial coverage dosing frequency of every 60 days for one year. Requests for increased frequency will need to demonstrate failure on every other month dosing
Sylvant (siltuximab)	J2860	Approved Diagnosis: • multicentric Castleman disease (MCD) Approval Timeframe: • Initial authorization: 1 year • Continuation authorization: 1 year Prescriber Specialty Requirement: none Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Documentation confirming diagnosis of multicentric Castleman disease (MCD) • Must be HIV negative • Must be human herpesvirus (HHV) negative Continuation Criteria: • Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demostrable clinically significant improvement in condition has occurred after initiation of drug therapy. Additional Information: • This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center.

Synagis (palivizumab)	90378	 Approved Diagnosis: Prematurity Chronic Lung Disease Heart Disease Neuromuscular Disease, congenital airway anomaly, or pulmonary abnormality Immunocompromised Approval Timeframe: Initial authorization: maximum of 5 doses per RSV season (typically October 1 to May 1) Continuation authorization: will be determined by clinical reviewer Prescriber Specialty Requirement: none Age Limitation: Patient must be age 24 months or younger Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: For patients age 0 to 12 months: Contiliden who have not had a dose of Beyfortis" (nirsevimab) in the current RSV season; AND Mother did not receive vaccination against RSV in the 2nd or 3rd trimester; AND Prematurity Documentation confirming that patient was born at 28 weeks, 6 days gestation or earlier during their first RSV season Chronic Lung Disease Documentation confirming that patient required more than 21% oxygen for at least 28 days after birth NICU discharge summary must be included Hear Disease Documentation confirming that patient has hemodynamically significant cyanotic CHD Documentation confirming that patient has acyanotic CHD and is receiving medication for CHF NICU discharge summary must be included Nucu disease? Congenital Airway Anomaly / Pulmonary Abnormality Documentation confirming that patient will be profoundly immunocompromised because of chemortherapy or other conditions during the RSV season.

		 Immunocompromised Documentation confirming that patient will be profoundly immunocompromised because of chemotherapy or other conditions during the RSV season. Continuation Criteria: Considered in a case by case basis. If any infant or young child receiving monthly Synagis prophylaxis experiences a breakthrough RSV hospitalization, monthly prophylaxis should be discontinued because of the extremely low likelihood of a second RSV hospitalization in the same season (<0.5%). Additional Information The recommended dose of Synagis is 15mg/kg body weight administered intramuscularly This medication may be approved under either the pharmacy benefit or the medical benefit (not both)
Tepezza (teprotumumab-trbw)	J3241	 Approved Diagnosis: Grave's Disease Approval Timeframe: Initial authorization: 6 months (total of 8 doses per lifetime) Continuation authorization: N/A Prescriber Specialty Requirement: Prescriber must be (or working in consultation with) an ophthalmologist Age Limitation: Patient must be age 18 years or older Doses & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Documentation confirming diagnosis of Grave's disease and documentation that the patient has active moderate to severe TED (not sight-threatening but has an appreciable impact on daily life) with documentation of one or more of the following: Idi retraction of >2 mm moderate or severe soft-tissue involvement proptosis >3 mm above Documentation Clinical Activity Score (CAS) Report (score must be ±4) in the most severely affected eye Must not have had previous orbital surgery (i.e. orbital decompression, extraocular muscle surgery, eyelid repositioning/eyelid retraction, and cosmetic soft tissue redraping) or irradiation for TED prior to the start of threapy Failure of an adequate trial of a systemic corticosteroid (a cumulative dose of at least 4.5 gm of methylpredinsione IV OR prednisone daily doses of at least 6.1 gm, unless contraindicated or clinically significant adverse effects are experienced (e.g. poorly-controlled diabetes) Additional Information: The recommended dose is an intravenous infusion of 10 mg/kg for the initial dose followed by an intravenous infusion of 20 mg/kg every three weeks for 7 additional infusions. Tepezza is limited to a total of 8 doses per lifetime. This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be given in an outpatient hospital infusion center.

Testopel (testosterone 75mg pellet)	S0189 J3490	 Approved Diagnosis: Hypogonadism Gender Dysphoria Approval Timeframe: Initial authorization: 1 year Continuation authorization: 1 year Prescriber Specialty Requirement: none Age Limitation; none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Hypogonadism Clinical signs and symptoms consistent with androgen deficiency (requests for coverage to treat fatigue and decreased libido with no other symptoms is not a covered benefit); AND A serum total testosterone test result of 300 ng/dL or less on two different dates in the previous 12 months (lab results must be submitted with request); AND Must first try injectable testosterone enanthate or injectable testosterone cypionate (e.g. testosterone enanthate 150 to 200 mg every two weeks) for a minimum of two months with failure to improve symptoms and failure to increase total serum testosterone above 300ng/dL. If patient experiences fluctuations in energy, mood, or libido, after two months or more, the dosage can be changed (e.g. testosterone, must then first try generic topical testosterone for a minimum of two months with failure to improve symptoms and failure to improve symptoms and failure to increase total serum testosterone awee(); AND After a trial and failure with generic injectable testosterone, either testosterone enanthate or testosterone cypionate (a.g. testosterone, either testosterone enanthate or testosterone cypionate above 300ng/dL. Patient has been diagnosed with Gender Dysphoria and documentation of diagnosis must be submitted; AND After a trial and failure with gen

Tezspire (tezepelumab-ekko)	J2356	 Approved Diagnosis: addon maintenance treatment of severe asthma Approved Timeframe: Initial authorization: 1 year Continuation authorization: 1 year Prescriber Specialty Requirement: none Age Limitation: Patient must be 12 years or older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Patient must nave been compliant on all the following therapies for at least 3 months: High-dose inhaled corticosteroid (ICS) Long-acting beta agonist (LABA) One additional asthma controller medication (e.g. leukotriene receptor antagonist. Spiriva); AND Patient must have had ≥ 2 asthma exacerbations in the previous year that required at least of the following:

Tofidence (tocilizumab-bavi)	Q5133	Approved Diagnosis: • Rheumatoid Arthritis (RA) • Polyarticular Juvenile Idiopathic Arthritis (SJIA) • Systemic Juvenile Idiopathic Arthritis (SJIA) • Giant Cell Arteritis • Cytokine Release Syndrome Approval Timeframe: • Initial authorization: 2 years • Continuation authorization: 2 years Prescriber Specialty Requirement: none Age Limitation: age 2 years or older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Rheumatoid Arthritis (RA) • Must provide documentation confirming diagnosis, AND • Must provide documented trial and documented thrapeutic failure with infliximab Juvenile Idiopathic Arthritis (Polyanciular & Systemic) • Must provide documentation confirming diagnosis, AND • Must provide documentation confirming diagnosis, AND • Must provide documentation confirming diagnosis, AND • Must provide baccumentation confirming diagnosis, AND • The IV formulation of Tofidence is being used for treatment; AND • The V formulation of Tofidence is being used for treatment; AND • Must provide documentation confirming diagnosis, AND • Must provide documentation confirming diagnosis, AND • Must provide documentat

Tremfya IV (guselkumab)	J1628	Approved Diagnosis: Crohn's disease Ulcerative Colitis Approval Timeframe: Initial authorization: 2 months, total of 3 doses Continuation authorization: N/A Prescriber Specialty Requirement: none Age Limitation: Patient must be 18 years or older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Documentation confirming diagnosis of moderate to severe active ulcerative colitis; OR Documentation confirming diagnosis of moderately to severely active Crohn's disease (CD); AND Must have a documented trial and documented therapeutic failure with Humira Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center. When used for Ulcerative Colitis or Crohn's Disease, three IV induction doses will be covered under the medical benefit. Subsequent maintenance doses will only be covered under the pharmacy benefit – see Medicaid Approved Drug List for coverage details

Tyenne IV (tocilizumab-aazg)	Q5135	Approved Diagnosis: • Rheumatoid Arthritis (RA) • Polyatricular Juvenile Idiopathic Arthritis (PJIA) • Systemic Juvenile Idiopathic Arthritis (SJIA) • Giant Cell Arteritis • Unitial authorization: 2 years • Continuation authorization: 2 years Prescriber Specialty Requirement: none Age Limitation: age 2 years or older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Must provide documentation confirming diagnosis, AND • Must provide the patient's current weight, AND • Must provide documented trial and documented therapeutic failure with infliximab Juvenile Idiopathic Arthritis (Polyarticular & Systemic) • Must provide documented trial and documented therapeutic failure with infliximab Juvenile Idiopathic Arthritis (Polyarticular & Systemic) • Must provide documentation confirming diagnosis, AND • The V formulation of Tyenne is being used for treatment, AND • The subcuta

Tysabri (natalizumab)	J2323	Approved Diagnosis: • Relapsing - Remitting Multiple Sclerosis • Crohn's disease Approval Timeframe: • Initial authorization: 1 year Prescriber Specialty Requirement: none Age Limitation: Patient must be 18 years or older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Relapsing - Remitting Multiple Sclerosis • Flattamer • Glatinamer • Glatinamer • Initionod: OR • Treprover a dimetry fumarate • fingolinod: OR • teriflunomide Moderate to Severe active Crohn's disease • Patient has prior use of conticosteroids; AND • Patient must have a documented trial and documented therapeutic failure with both Humira and infliximab Continuation Criteria: • Must have a positive clinical response to Tysabri@ as evidenced by experiencing disease stability or improvement • Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy. Additional Information • This drug is included in Priority Health's medical policy 91414 – Infusion Services and Equipment, which requires medications to be infused in an outpatient hos

Tzield (teplizumab-mzwv)	J9381	Approved Diagnosis: • Stage 2 Type 1 Diabetes Approval Timeframe: • Initial authorization: one time course (14 doses) • Continuation authorization: N/A Prescriber Specialty Requirement: must be prescribed by, or in consultation with, an endocrihologist Age Limitation: 8 years or older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Documentation showing a diagnosis of stage 2 type 1 diabetes • Must have documentation of at least 2 of the following autoantibodies: • Glutamic coid decarboyase 65 (GAD) autoantibody • Insulin autoantibody (IAA) • Insulin autoantibody (IAA) • Insulin autoantibody (CATBA) • Insulin autoantibody (CATBA) • Insulin autoantibody (CATBA) • Insulin documentation of patient's current weight AND autoantibodies testing results Additional Information: • This drug is included in Priority Health's medical policy 91414 – Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center.

Ultomiris (ravulizumab-cwvz)	J1303	Approved Diagnosis: • Provysmal Inceturnal hemoglobinuria (PNH) • Atypical hemolytic urenic syndrome (aHUS) • Refractory generalized myasthenia gravis (MG) • Neuromyelitis optica spectrum disorder (NMOSD) Approved Timérame: • Initial authorization: 6 months • Continuation authorization: 1 year Prescriber Socialty Requirement; for refractory generalized myasthenia gravis (MG) only, must be prescribed by a neurologist Age Limitation: none Dass & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Paroxystamin Inceturnal hemoglobinuria (PNH) • Must have received meningococcal vaccine at least two weeks before starting Ultomiris treatment; AND • Must have flow cytometric confirmation ≥10% granulocyte clone cells or have symptoms of thromboembolic complications (abdominal pain, shortness of breath, chest pain, end organ damage) Atypical hemolytic urenic syndrome (aHUS) • Must have received meningococcal vaccine at least two weeks before starting Ultomiris treatment; AND • Mysthenia Gravis Foundation of America (MGFA) Clinical Classification Class II = IV; AND • Mysthenia Gravis Activities of Daily Living (MG-ADL) total score; AND • Provide baseline quantitative myasthenia gravis (QMG) total score; AND • Provide baseline quantitative myasthenia gravis (GMG) total

	Continuation Criteria:
	Paroxysmal nocturnal hemoglobinuria (PNH)
	Must have a decrease disabling symptoms
	 Hemoglobin levels must be stabilized Patient has experienced an improvement in fatigue and quality of life
	 <u>Atypical hemolytic uremic syndrome (aHUS)</u> Must have decreased signs of thrombotic microangiopathy (normalization of platelet
	counts and LDH levels, reduction in serum creatinine)
	 <u>Refractory generalized myasthenia gravis (MG)</u> Must have documented response as evidenced by BOTH of the following: improved MG-
	ADL total score from baseline, AND improved (QMG) total score from baseline.
	Neuromyelitis optica spectrum disorder (NMOSD)
	Documentation of a decrease in relapse rate
	Additional Information:
	 This drug is included in Priority Health's medical policy 91414 – Infusion Services and
	Equipment, which requires medications to be administered by home infusion. Home
	infusion agencies must bill the drug to the pharmacy benefit. Note: if this medication is
	new to the patient, Priority Health may cover up to 3 months of treatment at an outpatient hospital infusion center until safety has been established.
	 Therapy may be discontinued if patient is noncompliant with medical or pharmacologic
	therapy OR no demonstrable clinically significant improvement in condition has occurred
	after initiation of drug therapy.
	Ultomiris will not be covered in combination with Soliris, Intravenous/subcutaneous
	Immune Globulin, Rystiggo, or Vyvgart

Uplizna (inebilizumab-sdon)	J1823	 Approved Diagnosis: Neuromyelitis optica spectrum disorder (NMOSD) Ig-G4 Related Disease Approved Timeframe: Ig-G4 Related Disease Approved Timeframe: Continuation authorization: 1 year Continuation authorization: 1 year Prescriber Specialty Requirement: Neurologist Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: NMOSD Documentation provided confirming diagnosis of NMOSD and anti-aquaporin-4 (AQP4) antibody positive Must have had at least one attack requiring rescue therapy in the last year or two attacks requiring rescue therapy in the last 2 years Must have progressive disease on a therapeutic trial of rituximab AND satralizumab (Enspryng) Must have progressive disease on a therapeutic trial of rituximab AND satralizumab (Enspryng) Must have progressive disease on a therapeutic trial of plucocorticids AND rituximab; AND Score of at least 20 on the 2019 ACR/EULAR classification criteria; AND Patient is experiencing (or recently experienced) an IgG4-RD flare that requires initiation or continuation of glucocorticid (GC) treatmert; AND IgG4-RD affecting at least 2 organs/site; AND Have progressive disease on a therapeutic trial of glucocorticids AND rituximab; AND Prescriber is a specialist or has consulted with a specialist for the condition being treated. Continuation of a decrease in relapse rate IgG4-Related Disease requests:

Ustekinumab IV Otulfi Pyzchiva Selarsdi Steqeyma Ustekinumab Yesintek	Q9999 JA Q9997 Q9998 JA J3358 Q5100 JA	Approved Diagnosis: Crothr's Disease Ulcerative Colitis Approval Initial authorization: 1 month (one dose) Continuation authorization: N/A Prescriber Specially Requirement: none Age Limitation: age 18 years or older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Documentation confirming diagnosis; AND Must have a documented trial and documented thrapeutic failure with Humira; AND Must have a documentation of patient's current weight Additional Information: When used for Crothr's disease or ulcerative colitis; a single IV induction dose will be covered under the medical benefit. Subcutaneous maintenance doses will only be covered under the pharmacy benefit.

Vabysmo (faricimab-svoa)	J2777	 Approved Diagnosis: Neovascular (wet) age-related macular degeneration (AMD) Diabetic macular edema (DME) Macular edema foliowing retinal vein occlusion (RVO) Approval Timeframe: Initial authorization: 1 year Continuation authorization: 1 year Prescriber Specialty Requirement: none Age Limitation: none Documentation confirming diagnosis Patients currently receiving treatment with Vabysmo and who have demonstrated an adequate response are not required to try Avastin. Neovascular (wet) age-related macular degeneration (AMD): Must first try Avastin (bevacizumab) for at least 3 consecutive months with failure to effectively improve baseline visual acuty and/or reduce fluid. Must try Lucentis (ranibizumab), biosimiliars of Lucentis, or affibercept for at least 3 consecutive months with failure to effectively improve baseline visual acuty and/or reduce fluid. Avastin is not required if patient has serous pigment epithelial detachment (FED), hemorrhagic PED, subretinal hemorrhage, or posterior uveal bleeding syndrome. Diabetic macular edema (DME) with baseline visual acuity 2D/SD or worse Documentation of baseline best-corrected visual acuity ad/or reduce fluid. Must try Lucentis (ranibizumab), biosimilars of Lucentis, or aflibercept for at least 3 consecutive months with failure to effectively improve baseline visual acuity and/or reduce fluid. Must try Lucentis (ranibizumab), biosimilars of Lucentis, or aflibercept for at least 3 consecutive months with failure to effectively improve baseline visual acuity and/or reduce fluid acut y add/or reduce fluid acut y add/or reduce fluid. Must try Lucentis (ranibizumab), biosimi

Veopoz (pozelimab-bbfg)	J9376	Approved Diagnosis: • CD55-deficient protein-losing enteropathy (CHAPLE disease) Approval Timeframe: • Initial authorization: 6 months • Continuation authorization: 12 months Prescriber Specialty Requirement: Must be prescribed by or in consultation with hematologists, gastroenterologists, or those who specialize in rare genetic hematologic diseases Age Limitation: 1 year of age or older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Documentation confirming diagnosis of CHAPLE disease that includes symptoms of the condition (diarrhea, vomiting, abdominal pain, etc.) and a low serum albumin; AND • Documentation confirming CD55 loss-of function mutation by genetic testing; AND • Documentation of patient's current weight; AND • Documentation of a positive clinical response (e.g. improvement or no worsening in clinical symptoms, increase in or stabilization of albumin and IgG concentrations, increase in growth percentiles) Additional Information: • Veopoz is not covered in combination with Soliris/Ultomiris • This drug is included in Priority Health's medical policy 91414 – Infusion Services and Equipment, which requires medications to be administered by home infusion. Home infusion denter until safety has been established.
Vibativ (telavancin)	J3095	Approved Diagnosis: • Acute bacterial skin and skin structure infection (ABSSSI) Approval Timeframe: • Initial authorization: 1 month • Continuation authorization: N/A Prescriber Specialty Requirement: none Age Limitation: 18 years or older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Documentation of culture and sensitivity results must be sent to Priority Health showing the patient's infection is not susceptible to alternative antibiotic treatments • Must have documented methicillin-resistant Staphylococcus aureus (MRSA) acute bacterial skin and skin structure infection (ABSSSI) that is resistant to all other MRSA sensitive antibiotics or be unable to tolerate alternatives.
Vpriv (velaglucerase alfa)	J3385	Approved Diagnosis: • Non-neuropathic Gaucher's disease Approval Timeframe:

		Initial authorization: 6 months Continuation authorization: 1 months
		Continuation authorization: 1 year
		Prescriber Specialty Requirement: none Age Limitation: none
		Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis
		 Initial Criteria: Documentation confirming diagnosis of chronic Non-neuropathic Gaucher's disease Continuation criteria only applies if the member is unable to safely receive the medication by home infusion Documentation confirming diagnosis of chronic Non-neuropathic Gaucher's disease Patient has demonstrated a beneficial response to therapy compared to pretreatment baseline in one or more of the following:
Vyalev (foscarbidopa and foslevodopa)	J7356	Approved Diagnosis: • Parkinson's disease Approval Timeframe: • Initial authorization: 1 year • Continuation authorization: 1 year Prescriber Specialty Requirement: Must be prescribed by, or in consultation with, a neurologist. Age Limitation: Patient is 18 years of age or older Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: • Documentation of diagnosis of Parkinson's disease that is levodopa-responsive; AND • Documentation that the patient is experiencing persistent motor fluctuations with a minimum of 2.5 hours of "off" time per day despite optimized carbidopa/levodopa therapy Continuation Criteria: • Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy
Vyepti	J3032	Approved Diagnosis: Migraine Prevention

(eptinezumab-jjmr)		
		Approval Timeframe: Initial authorization: 3 months
		 Continuation authorization: 1 year
		Prescriber Specialty Requirement: none
		Age Limitation: 18 years or older
		 Dose & Frequency: Limited to initial dosing of 100mg given every 3 months. For patients not responsive to the 100mg dose, a single authorization can be made for a 300mg dose which will be assessed for efficacy beyond that observed for the 100mg dose
		 Initial Criteria: Must experience 4 or more migraines per month Must have tried and failed at least 1 agent in 2 of the following groups of prophylactic treatment options (minimum of 28 days for each):
		 <u>Continuation Criteria:</u> Must demonstrate effectiveness (>50% reduction in monthly migraine days)
		 Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center.
Vyvgart Hytrulo	J9334	Approved Diagnosis: • generalized Myasthenia Gravis (gMG) • Chronic inflammatory demyelinating polyneuropathy (CIDP)

(efgartigimod alfa	
and hyaluronidase-	Approval Timeframe:
qvfc)	 Initial authorization: gMG: 100 days (Limited to 2 cycles = 4 doses per cycle)
	 CIDP: 3 months
	Continuation authorization: 12 months
	Prescriber Specialty Requirement: Must be prescribed by, or in consultation with, a neurologist/ neuromuscular specialist
	Age Limitation: none
	Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis
	Initial Criteria:
	<u>Generalized Myasthenia Gravis (gMG)</u>
	 Documentation confirming anti-acetylcholine receptor antibody (AChR-Ab) positive disease; AND
	Documentation of Myasthenia Gravis Foundation of America (MGFA) Clinical
	 Classification Class II-IV; AND Documentation of Myasthenia Gravis Activities of Daily Living (MG-ADL) total score
	greater than or equal to 5; AND
	 Must provide baseline quantitative myasthenia gravis (QMG) total score; AND Documentation confirming patient had progressive disease on a therapeutic trial of at
	least TWO of the following over the course of at least 12 months: azathioprine,
	 cyclosporine, mycophenolate mofetil, tacrolimus, methotrexate, cyclophosphamide; AND Patient has required 2 or more courses of plasamapheresis/plasma exchanges and/or
	intravenous immune globulin for at least 12 months without symptom control.
	Chronic inflammatory demyelinating polyneuropathy (CIDP)
	The patient had a progressive or relapsing course of disease over at least 2 months; AND The patient has a because least does to does the does reflexed in uncertainty and the second does at least 2 months; AND
	 The patient has abnormal or absent deep tendon reflexes in upper or lower limbs; AND Baseline strength and weakness (and current strength and weakness for continuation
	requests) is documented in the patient's medical record using an objective clinical measuring tool (e.g. INCAT, MRC, 6-minute timed walking test, Rankin, Modified Rankin);
	 AND Electrodiagnostic testing indicates demyelination, documented by the following
	demyelination criteria:
	 partial motor conduction block in two or more motor nerves or in one nerve plus one other demyelination criterion listed in (b)-(g) in one or more other
	nerves;
	 distal CMAP duration increase in one or more nerves plus one other demuslimation aritorian listed in (a) at (a) in one or more other nerves;
	 demyelination criterion listed in (a) or (c)-(g) in one or more other nerves; abnormal temporal dispersion conduction must be present in two or more
	motor nerves;
	 reduced conduction velocity in two or more motor nerves; prolonged distal motor latency in two or more motor nerves;
	o absent F wave in two or more motor nerves plus one other demyelination
	 criterion listed in (a)-(e) or (g) in one or more other nerves; OR prolonged F wave latency in two or more motor nerves; AND
	 prolonged F wave latency in two or more motor nerves; AND Patient has tried and failed on at least a 3-month trial of immunoglobulin (IG) OR has a
	documented intolerance/contraindication to IG
	continued >
	Continuation Criterio:
	Continuation Criteria:

		Therapy may be discontinued if patient is noncompliant with medical or pharmacologic
		 Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy
		Constalized Musethenia Cravia (gMC)
		 Generalized Myasthenia Gravis (gMG) Must have documented response as evidenced by BOTH of the following:
		• improved MG-ADL total score from baseline (\geq a 2-point reduction)
		 improved MG ADL total score from baseline (≥ a 2-point reduction) improved (QMG) total score from baseline (≥ a 3-point improvement)
		Chronic inflammatory demyelinating polyneuropathy (CIDP)
		Documentation of significant clinical improvement in neurologic symptoms or
		stabilization of disease (measurement of response may include nerve conduction
		studies, objective clinical measurement tools (e.g. INCAT, Medical Research Council [MRC] sum score, grip strength, etc.) or physical exam showing improvement in
		neurological strength and sensation
		Additional Information:
		 This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion
		center.
		 Vyvgart will not be covered in combination with Intravenous/Subcutaneous Immune
		Globulin, Soliris, Rystiggo, or Ultomiris
Vwaart	J9332	Approved Diagnosis:
Vyvgart	J7332	generalized Myasthenia Gravis (gMG)

(efgartigimod alfa-		Approval Timeframe:
fcab)		 Initial authorization: 100 days (Limited to 2 cycles = 4 doses per cycle)
1000)		Continuation authorization: 12 months
		Prescriber Specialty Requirement: Must be prescribed by, or in consultation with, a neurologist
		Age Limitation: none
		Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis
Winrevair	J3590	Approved Diagnosis:
(Sotatercept-csrk)	C9399	Pulmonary Arterial Hypertension (PAH)
		Approval Timeframe:

		Initial authorization: 6 months
		Continuation authorization: 1 year
		Prescriber Specialty Requirement: Prescriber is a specialist or has consulted with a specialist for the condition being treated
		Age Limitation: 18 years of age or older
		Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis
		Initial Criteria:
		Documentation confirming Diagnosis of PAH WHO group 1, functional class II or III; AND
		 Documented trial and failure of, or contraindication to, at least 2 months of combination therapy including one Phosphodiesterase 5 (PDE-5) inhibitor AND one Endothelin receptor antagonist (ERA); AND
		 Winrevair is being used as add on therapy to standard care (at least 2 other PAH agents such as an ERA, PDE5i, prostaglandins, etc.); AND
		 Platelet count of > 50,000/mm3 (> (>50x109/L), acceptable hemoglobin levels, and other labs in accordance with the product label.
		Continuation Criteria:
		Documentation confirming diagnosis
		 Must provide documentation showing the patient has experienced benefit to therapy compared to pretreatment baseline in one or more of the following: improvement in WHO functional class, risk status, exercise capacity (6MWD)
		Additional Information:
		 This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be given in an outpatient hospital infusion center.
		 Therapy may be discontinued if patient is noncompliant with medical or pharmacologic therapy OR no demonstrable clinically significant improvement in condition has occurred after initiation of drug therapy.
Xenpozyme (olipudase alfa-rpcp)	J0218	 Approved Diagnosis: acid sphingomyelinase deficiency (ASMD) type A/B or type B
		Approval Timeframe:
		Initial authorization: 6 months
		Continuation authorization: 12 months
		<u>Prescriber Specialty Requirement</u>: Must be prescribed by, or in consultation with, a specialist familiar with the treatment of lysosomal storage disorders
		Age Limitation: none
		Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis
		Initial Criteria:
		Documentation confirming diagnosis must be submitted which includes:
		• Documentation supporting the request must be submitted which includes the patient's
		 current weight For adults, diffusion capacity of the lungs for carbon monoxide (DLco) ≤70% of predicted
		normal • Spleen volume ≥6 multiples of normal (MN) for adults or ≥5 MN for patients less than 18 years old
		Continuation Criteria:
		 Documentation of a clinical response to therapy compared to pretreatment baseline in
		one or more of the following:
		 reduction in spleen or liver volume increase in platelet count
		 improvement in lung function (e.g., DLco); OR
<u>.</u>		

		 improvement in symptoms (shortness of breath, fatigue, etc.).
		 Additional Information: Xenpozyme will not be covered if: Patient has acute or rapidly progressive neurologic abnormalities Patient requires use of invasive ventilatory support or requires noninvasive ventilatory support while awake and for greater than 12 hours a day Patient's platelet count is <60 × 103/µL Patient has an international normalized ratio (INR) >1.5 Patient's alanine aminotransferase (ALT) or aspartate aminotransferase (AST) is >250 IU/L or total bilirubin is >1.5 mg/dL This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center.
Xiaflex (collagenase, clostridium histolyticum)	J0775	 Approved Diagnosis: Dupuytren's contracture Peyronie's disease Approval Timeframe: Initial authorization: See specific durations under criteria Continuation authorization: N/A Prescriber Specialty Requirement: none Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Documentation confirming diagnosis of Dupuytren's contracture with: Flexion contracture of at least one finger, other than the thumb, of greater than or equal to 20 degrees at the MP or PIP joints; AND Patient must be free of chronic muscular, neurological, or neuromuscular disorders affecting the hands; AND Xtaflex is an alternative to surgical intervention. For coverage consideration, please provide the medical reason that surgery would not be an option for the patient. NOTE: Maximum dose is 3 injections per cord every 4 weeks, with a maximum of 2 injections per hand per visit (which may be administered as either 1 injection per cord on 2 cords affecting 2 different joints OR 2 injections on 1 cord affecting 2 joints). Documentation confirming diagnosis of Peyronie's disease with: Penile curvature of 30 degrees or more for 12 months or longer; AND Erections must be painful

	1	
		subsequent treatment cycle must be six-weeks apart and is only authorized if the patient's penile curvature is 15 degrees or more.
		Additional Information:
		Priority Health considers Peyronie's disease cosmetic in the absence of painful erections.
Xolair (omalizumab)	J2357	Approved Diagnosis: • Asthma • Chronic Urticaria • Chronic rhinosinusitis with nasal polyp (CRSwNP)
		IgE-mediated food allergy
		 Approval Timeframe: Initial authorization: see below Continuation authorization: 1 year
		Prescriber Specialty Requirement: none
		Age Limitation: see below
		Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis
		Initial Criteria: Moderate to Severe Persistent Asthma • Must be at least 6 years of age
		 Initial authorization for 1 year Must have been compliant on all of the following therapies for at least 3 months:
		 High-dose inhaled corticosteroid (ICS)* Long-acting beta agonist (LABA) One additional asthma controller medication (e.g., leukotriene receptor
		 antagonist, Spiriva) Compliant use of the above medications must not be effective as demonstrated by at
		 least one of the following: Oral or systemic steroid treatment or an increase in the current oral steroid maintenance dose
		 Hospitalization and/or ED visit Increasing need for short-acting beta2-agonist Must have a pagifive data tag in vitro reactivity to a paraphial accoultance (lab regultance)
		 Must have a positive skin test or in-vitro reactivity to a perennial aeroallergen (lab results must be submitted) Must be within the recommended dosing range based on current weight and baseline IgE
		level

		-
		 Must not currently use tobacco products Must not use Xolair in combination with other biologics (e.g., Fasenra, Cinqair, Nucala)
		Chronic Urticaria:
		 Must be age 12 or older Initial authorization for 1 year
		 Must first try two or more H1 antihistamines OR
		 Must first try one H1 antihistamine and one or more of the following:
		• H2 antihistamine
		 Oral corticosteroid
		 Leukotriene modifier
		Chronic rhinosinusitis with nasal polyp (CRSwNP)
		Must be age 18 or older
		Initial authorization for 6 months
		 Baseline Nasal Polyps Score (NPS) of at least 5, with a unilateral score of at least 2 for each nostril
		 Must be within the recommended dosing range based on current weight and baseline IgE level
		 Symptomatic disease that is persistent for a minimum of 12 weeks, including all of the following:
		o Nasal obstruction
		 Rhinorrhea (anterior/posterior)
		 Diminished or loss of smell
		 Member must have tried and failed all of the following:
		 At least one prior treatment course with a systemic corticosteroid
		 Minimum 3 months compliant treatment with an intranasal glucocorticoid
		 Minimum 1-month trial with either a non-sedating antihistamine or antileukotriene agent (e.g., montelukast)
		antileukothene agent (e.g., montelukast)
		continued >
Xolair (omalizumab)	J2357	 IgE-mediated food allergy Must be at least one year of age Must have a confirmed diagnosis of an IgE-mediated food allergy Must be prescribed by or in consultation with an allergist or immunologist Must be used in conjunction with a food allergen-avoidant diet Must be within the recommended dosing range based on current weight and baseline IgE level Continuation Criteria: Moderate to Severe Persistent Asthma Peak flow improvement by: greater than 20%, or FEV1 improved by greater than or equal to 12% OR patient has experienced a reduction in symptoms (i.e. wheezing, shortness of breath, cough, chest tightness) Decrease in the use of quick relief medications or corticosteroids (oral or inhaled) Decrease in ER visits, hospitalizations, physician visits, or school/work absences due to acute asthma attacks Must not currently use tobacco products Must not use in combination with other biologics (e.g., Cinqair, Fasenra, or Xolair) Chronic Urticaria: Adherence to therapy
		 Adherence to therapy Reduction in the symptom of urticaria documented by the prescriber (chart notes supporting symptom reduction must be submitted)
		Chronic rhinosinusitis with nasal polyp (CRSwNP)
		 Adherence to therapy including Xolair and intranasal steroid Reduction in the symptom of rhinosinusitis with nasal polyp documented by the
		 Reduction in the symptom of minosindustry with hash polyp documented by the prescriber (chart notes supporting symptom reduction must be submitted to Priority
		Health) including, but not limited to:
		 Improvement in nasal congestion
		 Decrease in nasal polyp size
		 Improvement in ability to smell
		 Decrease in rhinorrhea

		 Decrease in nasal inflammation Decrease in oral corticosteroid use IgE-mediated food allergy Continue food allergen-avoidant diet; AND Continue to be prescribed by or in consultation with an allergist or immunologist Additional Information: This drug is included in Priority Health's medical policy 91414 - Infusion Services and Equipment, which requires medications to be infused in an outpatient hospital infusion center. This criteria applies to all Xolair formulations
Zevaskyn (prademagene zamikeracel)	C9399 J3590	 Approved Diagnosis: Recessive dystrophic epidermolysis bullosa (RDEB) Approval Timeframe: Initial authorization: One time Continuation authorization: N/A Prescriber Specialty Requirement: Prescribed by a qualified dermatologist specializing in EB at a Zevaskyn qualified treatment center (QTC) Age Limitation: none Dose & Frequency: Limited to FDA approved dose & frequency by diagnosis Initial Criteria: Documentation confirming diagnosis of Recessive dystrophic epidermolysis bullosa (RDEB) with documentation of genetic testing confirming mutations in both COL7A1 genes Documentation confirming presence of partial-thickness RDEB wounds open chronically for 2 6 months Provider attests that Zevaskyn will only be applied to partial-thickness RDEB wounds open chronically for 2 6 months Continuation Criteria: A new PA is required for any previously untreated areas Additional Information: Vyjuvek or Filsuvez cannot be used on wounds treated or designated to be treated with Zevaskyn
