

# Close your Medicare patients' care gaps with our at-home test kits.

We're sending at-home test kits, in partnership with Let's Get Checked (LGC) and Exact Sciences, to help close your Priority Health Medicare patients' care gaps for **kidney health, HbA1c and colorectal cancer screenings**.

## Let's Get Checked (LGC)

### What care gaps does it target?

Let's Get Checked sends at-home test kits for **kidney health** and **hemoglobin A1c (HbA1c)**.

### How does it work?

We use claims data to identify Priority Health Medicare patients still in need of a kidney health and/or HbA1c screening.

Identified patients will receive a letter in the mail from LGC with information on participating in the program. Test kits will be mailed to patients in October.

Patients who return their test kits will receive results via mail, as will their attributed PCPs. ACNs will receive weekly reports of patient results from their Provider Strategy and Solutions Consultant.

## Exact Sciences

### What care gaps does it target?

Exact Sciences sends at-home test kits for **colorectal cancer screenings**.

### How does it work?

This year, our Exact Sciences program will be **opt-in only**. If your ACN is interested in participating, contact your Provider Strategy and Solutions Consultant to get started.

We'll send participating ACNs a target list of your Priority Health Medicare patients with a gap in care for a colorectal cancer screening.

Exact Sciences will mail these patients at-home Cologuard® test kits.

Patients who return their test kits will receive results via mail, as will their attributed PCPs.

**Questions?** Contact your Provider Strategy and Solutions Consultant.
