

Galleri | Priority Medicare benefit brief

Short description Early cancer detection testing

Vendor Galleri®/GRAIL®

Summary The Galleri multi-cancer early detection test from GRAIL is a proactive blood test that screens for a “fingerprint” of 50+ cancers, including many with no recommended screening currently available.

Where services may be performed Once eligibility is determined, the screening kit will be sent to the member’s home, and they have two options: 1. Go to an in-network lab and have their blood drawn, or 2. Request a member of the GRAIL team to come to their home to complete the blood draw.

Authorization required? No.

Accessing and using the benefit To find out if they are eligible, members should visit priorityhealth.com/galleri. For questions or to learn more about the test, they can call **833.694.2553**.

Coverage criteria To be eligible for the screening members must be on either PriorityMedicare Thrive or Thrive Plus plans, be 65 years or older and have one of the following qualifications:

1. Diagnosis of HPV
2. Currently smokes or has a history of smoking
3. Elevated BMI: female ≥ 30 kg/m² or male ≥ 35 kg/m²

If the member is pregnant or has had a cancer diagnosis within the last three years, they are not eligible for this test.
