Tips and best practices

→ Check your PIP reports to identify patients with open care opportunities

- Review immunization record before every visit (preventive and sick) and administer needed vaccines
- Recommend immunizations to parents. Parents are more likely to agree with vaccinations when supported by the provider. Address common misconceptions and concerns about vaccinations.
- If applicable, give immunizations during a sick visit if the patient's immunizations are behind
- Schedule appointments for your patient's next vaccination before they leave your office
- Remind parents the importance of keeping immunizations on track
- Use phone calls, emails, text messages and/or postcards/letters to help keep parents engaged
- Offer options such as nurse visits for immunizations only, extended hours, walk-in vaccination clinics or drive-up immunization sites
- Make sure all immunizations are recorded in the Michigan Care Improvement Registry (MCIR)

Immunization records can be accepted as supplemental data.
