## Tips and best practices

- Check your PIP reports to identify patients with open care opportunities
- Avoid missed opportunities by taking advantage of every office visit to perform lead testing
- Order lead test at one year well visit or earlier and revisit at 18-month visit

- Consider a standing order for in-office lead testing
- Educate parents about the dangers of lead poisoning and the importance of testing
- If patient is referred to a laboratory, implement a process for follow-up if order is outstanding after 30 days (sooner if the child's second birthday is approaching within 30 days)
- Date of service and result must be documented with the notation of the lead screening test
- Lead test is considered late if performed after the child turns 2 years of age
- **A lead risk assessment doesn't satisfy the blood lead test requirement for Medicaid patients**
- **All Medicaid beneficiaries should be tested regardless of the risk score or household zip code**
