

# Importance of using CPT II Codes

Improve your patients' health outcomes and relieve your practice's administrative burden with these supplemental tracking codes.

## What are CPT<sup>®1</sup> II codes?

When used for HEDIS<sup>®2</sup> measures, CPT II codes support efficient data collection and patient care gap closure for performance measurement. They include four digits followed by the letter "F" and describe:

- Clinical components – typically evaluation, management or clinical services
- Results from clinical laboratory or radiology tests and other procedure
- Identified processes intended to address patient safety practices

When you verify that you performed quality procedures and closed care gaps, you're confirming that you've given the highest quality care to your patients, our members.

## Why bill CPT II codes?

Including appropriate CPT II codes on claims submissions will improve efficiencies in closing patient care gaps since they provide additional details. Their use can also result in:

- **Fewer medical record requests.** When you add CPT II codes, we won't have to request charts from your office to confirm care you've already completed
- **Enhanced performance.** With better information, we can work with you to help identify opportunities to improve patient care. This may lead to better performance on HEDIS measures for your practice
- **Improved health outcomes.** With more precise data, we can refer our plan members to our programs that may be appropriate for their health situation to help support your plan of care.
- **Less mail for your patients.** With more complete information, we can avoid sending reminders to patients to get screenings they may have already completed

## How do I bill CPT II codes?

CPT II codes describe clinical components, usually evaluation, management or clinical services, and aren't associated with a relative value. CPT Category II codes are billed in the procedure code field the same as CPT I codes and should be billed with a \$0 billable charge amount.
