The Vaccines for Children (VFC) Program promotes health equity by increasing patients' access to immunizations.

About the program

What's the VFC program?

The [VFC Program](#) is a federally funded program offered through the Center of Disease Control (CDC) and provides you with all routine vaccines recommended by the Advisory Committee on Immunization Practices (ACIP) for your Medicaid eligible patients ages 0-18 years.

Why's the VFC program important?

This program prioritizes preventive care for Medicaid-eligible patients, reduces disparities and safeguards communities from preventable diseases. It works to ensure no child misses out on essential vaccinations due to barriers to care.

How does the VFC program help you in your practice?

Provider benefits to participating in the VFC program include:

- **Cost** – Through the VFC program, you'll be provided, and can administer, vaccines recommended by the ACIP at no cost to you, while still receiving reimbursement for administration. This can help improve vaccination rates and increase your performance in our PCP Incentive Program (PIP).
- **Convenience for your patients** – Having vaccines available in your clinic means your patients don't have to go elsewhere for preventive care. They receive all necessary vaccinations directly in your office, removing barriers to care and helping close important care gaps.

Who's eligible to participate in the VFC program?

Patient eligibility – A child is [eligible for the VFC Program](#) if they are 0 to 18 years of age and are one of the following:

- Uninsured
- Medicaid-eligible or Medicaid-enrolled
- American Indian or Alaska Native
- Underinsured

Provider eligibility – Any healthcare provider, including pharmacists and pharmacies, authorized by their state law granting them the authority to administer vaccines by prescription, vaccine protocol or prescribing authority can be a VFC program provider.

Becoming a VFC provider

For Michigan providers, enrolling in the VFC program is completed through the Michigan Care Improvement Registry (MCIR). If you'd like to participate in the VFC program, notify your [local health department](#) and refer to the [MDHHS VFC Provider Manual](#) for details.

VFC enrollment requirements

Before becoming a VFC provider, you must complete the initial enrollment visit and trainings. **All enrollment expectations must be fulfilled within 3 months of activation/PIN assignment.** This includes:

- The enrollment site visit
- 30 days of documented vaccine temperature monitoring
- One primary vaccine coordinator and one backup coordinator per facility, as designated by the provider

Note: If you're unable to complete requirements within 3 months, the enrollment process will start over

Re-enrolling in the VFC program

All VFC providers must re-enroll into the program annually. The window for re-enrollment opens each January and must be completed by the due date indicated by your local health department. MDHHS provides final review and will suspend providers not re-enrolled by April 1.

All VFC requirements are dictated by the state of Michigan. Priority Health isn't responsible for changes made to the VFC program.

A snapshot of enrollment

To enroll in the VFC Program:

- Contact your [state/local/territory VFC Program coordinator](#) to request enrollment
- Complete and return the state provider enrollment forms
- Once you've completed and returned your enrollment forms, prepare for a site visit detailing the program's administrative requirements and proper storage and handling of vaccines
